FIRSTSECOND AMENDED CLASS ACTION COMPLAINT

Plaintiffs Anibal Rodriguez, JulieAnna Muniz, Eliza Cambay, Sal Cataldo, Emir Goenaga, Julian Santiago, Harold Nyanjom, Kellie Nyanjom, and Susan Lynn Harvey, individually and on behalf of all others similarly situated, file this FirstSecond Amended Class Action Complaint against defendant Google LLC (“Google” or “Defendant”), and in support state the following.

INTRODUCTION

“I want people to know that everything they’re doing online is being watched, is being tracked, is being measured. Every single action you take is carefully monitored and recorded.”

-Jeff Seibert; Former Head of Consumer Product of Twitter¹

1. This case is about Google's surreptitious interception and collection of ~~a vast amount of consumers' highly personal data from consumers' browsing histories on their mobile devices, whenever consumers use of thousands of certain software applications ("apps") on their mobile devices, including apps like The New York Times, Lyft, Alibaba, and The Economist that have incorporated Google code.~~ Google did this without notice or consent, where Plaintiffs had turned off a Google feature called "Web & App Activity." Google had promised that by turning off this feature, users would stop Google from saving their ~~data web and app activity data, including their app-browsing histories.~~ Google's promise was false.

2. Google has said, over and over again, that it values privacy and gives users control. The truth is just the opposite. Google continues to track users and collect their data even after users follow Google’s instructions on how to stop that tracking and collection. What Google calls its privacy “controls” are ruses. These Google features are intended to lull users—along with regulators, legislators, and app developers—into a false sense of control and privacy. No matter what users do, Google never stops intercepting, collecting, tracking, and using users’ [app-browsing](#) data.

3. Google surreptitiously collected users' personal data [from their mobile devices](#)

¹ *The Social Dilemma*, NETFLIX (Jan. 2020), <https://www.netflix.com/title/81254224?s=i&trkid=13747225>.

1 using ~~secret~~ software scripts embedded in Google’s Firebase SDK development platform. Third-
 2 party software developers then used Firebase SDK to build their apps (as Google coerced them to
 3 do). Users downloaded and used those apps to communicate with third parties (e.g., The New
 4 York Times app allows users to communicate with The New York Times ~~.) through their mobile~~
 5 ~~devices.~~ Unknown to users, the Firebase SDK scripts ~~secretly still~~ copied users’ communications
 6 and transmitted them to Google’s servers ~~through the users’ devices~~, to be saved and used by
 7 Google for Google’s purposes. Google did all this even if users switched off Google’s “Web &
 8 App Activity” feature, without providing any notice or obtaining any consent.

9 4. Google repeatedly told its users that if they “turn off” the “Web & App Activity”
 10 feature, then that would stop Google from “sav[ing]” the users’ app data. ~~Similarly, Google~~
 11 ~~presented such settings to their business partners as device level controls, including by requiring the~~
 12 ~~controls and accompanying representations written by Google as part of the Android operating~~
 13 ~~systems (“Android OS”) licensed to Android device manufacturers, such as Samsung.~~

14 5. Google’s Privacy Policy also promised users control. That Privacy Policy states,
 15 on the first page:

16 When you use our services, you’re trusting us with your
 17 information. We understand this is a big responsibility and work
 18 hard to protect your information and ***put you in control.***
 19
 20 Our *services* include: ... *products that are integrated into third-*
 21 *party apps* and sites, like ads and embedded Google Maps.
 22
 23 ~~*[A]cross our services, you can adjust your privacy settings to*~~
 24 ~~*control what we collect and how your information is used.*~~

25 That language is quite plain. Any reasonable person would understand it to mean just what it says:
 26 the user “can adjust . . . privacy settings to control what [Google] collects and how [user]
 27 information is used” by Google “across [Google’s] services,” which services “include . . .
 28 products,” like Google’s Firebase SDK platform, “that are integrated into third-party apps.”

29 6. In fact, ~~even when Google still collects data from users who turn off the “Web &~~
 30 ~~App Activity, Google continues to use its” feature. Google collects this data through various~~
 31 ~~backdoors made available through and in connection with Google’s Firebase Software~~

1 Development Kit, including not only Google Analytics for Firebase but also without limitation
 2 ██████████. All of these Firebase SDK scripts to collect users'
 3 products surreptitiously copy and provide Google with app activity data while WAA is turned off,
 4 including personal browsing data.

5 7. Google accomplishes this surreptitious interception and collection using mobile
 6 devices to copy data from user communications made via the with non-Google branded apps on
 7 users' devices, secretly collecting user data via and in connection with Google's Firebase SDK,
 8 including through background data collection processes such as Android's Google Mobile Service.
 9 Plaintiffs have requested but not yet received discovery from Google that is needed to understand
 10 the full scope of Google's unlawful data collection practices while WAA is turned off.

11 6.8. Google then uses the data it collects to create profiles and generate billions of dollars
 12 in revenues and other benefits. Google could have disclosed its collection and use of this data,
 13 while Web & App Activity is turned off, but Google chose not to. Instead, Google intentionally
 14 created an illusion of user control.

15 7.9. Because of its pervasive and unlawful interceptions of this data, Google knows
 16 users' friends, hobbies, political leanings, culinary preferences, cinematic tastes, shopping activity,
 17 preferred vacation destinations, romantic involvements, and even the most intimate and potentially
 18 embarrassing aspects of the user's app usage.

19 8.10. Google's practices affect millions of Americans who care about protecting their
 20 privacy. According to Google, more than 200 million people visit Google's "Privacy Checkup"
 21 website each year. Each day, nearly 20 million people check their Google privacy settings. People
 22 do this because they care about their privacy and believe that they can "control" what Google
 23 collects (because Google has told them so). The truth is that Google's so-called "controls" are
 24 meaningless. Nothing stops Google from collecting this data.

25 9.11. Google's practices unlawfully infringe upon consumers' privacy rights, give
 26 Google and its employees power to learn intimate details about individuals' lives, and make
 27 Google a potential target for "one-stop shopping" by any government, private, or criminal actor
 28 who wants to invade individuals' privacy.

10.12. Google must be held accountable for the harm it has caused. Google must be prevented from continuing to engage in its covert data collection from the mobile devices now in use by nearly every American citizen. Both federal and state privacy laws recognize and protect individuals' reasonable expectations of privacy in confidential communications under these circumstances, and these laws prohibit Google's unauthorized interception and subsequent use of these communications.

11.13. Plaintiffs are individuals whose apps/mobile devices transmitted data to Google as a result of Google’s Firebase SDK scripts even though Plaintiffs had turned off the “Web and App Activity” feature. Plaintiffs bring federal and California state law claims on behalf of other similarly situated Google subscribers in the United States (the “Classes,” defined herein in paragraph 225226). The Class Period begins on the date Google first received data, as a result of a Firebase SDK script, from the device of a user who had turned off the “Web & App Activity” feature. The Class Period continues through the present.

THE PARTIES

12.14. Plaintiff JulieAnna Muniz is an adult domiciled in El Cerrito, California. She had an active Google account during the Class Period.

15. Plaintiff Anibal Rodriguez is an adult domiciled in Homestead, Florida. He had active Google accounts during the Class Period.

16. Plaintiff Eliza Cambay is an adult domiciled in Torrance, California. She had active Google accounts during the Class Period.

17. Plaintiff Sal Cataldo is an adult domiciled in Sayville, New York. He had active Google accounts during the Class Period.

18. Plaintiff Emir Goenaga is an adult domiciled in Homestead, Florida. He had an active Google account during the Class Period.

19. Plaintiff Julian Santiago is an adult domiciled in Miami, Florida. He had an active Google account during the Class Period.

20. Plaintiff Harold Nyanjom is an adult domiciled in Wichita, Kansas. He had active Google accounts during the Class Period.

21. Plaintiff Kellie Nyanjom is an adult domiciled in Wichita, Kansas. She had active Google accounts during the Class Period.

22. Plaintiff Susan Lynn Harvey is an adult domiciled in Madera, California. She had active Google accounts during the Class Period.

23. Defendant Google LLC is a Delaware limited liability company with a principal place of business at what is officially known as The Googleplex, 1600 Amphitheatre Parkway, Mountain View, California 94043. Google LLC regularly conducts business throughout California and in this judicial district. Google LLC is one of the largest technology companies in the world and conducts product development, search, and advertising operations in this district.

JURISDICTION AND VENUE

24. This Court has personal jurisdiction over Defendant because Google's principal place of business is in California. Additionally, Defendant is subject to specific personal jurisdiction in this State because a substantial part of the events and conduct giving rise to Plaintiffs' and Class members' claims occurred in this State, including Google servers in California receiving the intercepted communications and data at issue, and because of how employees of Google in California reuse the communications and data collected.

25. This Court has subject matter jurisdiction over the federal claim in this action, namely the claim under the Federal Wiretap Act, 18 U.S.C. § 2511, pursuant to 28 U.S.C. § 1331.

26.25. This Court has subject matter jurisdiction over this entire action pursuant to the Class Action Fairness Act, 28 U.S.C. § 1332(d), because this is a class action in which the amount in controversy exceeds \$5,000,000, and at least one Class member is a citizen of a state other than California or Delaware.

27. This Court also has supplemental jurisdiction over the state law claims in this action pursuant to 28 U.S.C. § 1337 because the state law claims form part of the same case or controversy as those that give rise to the federal claim.

28.26. Venue is proper in this District because a substantial portion of the events and actions giving rise to the claims in this matter took place in this judicial District. Furthermore, Google is headquartered in this District and subject to personal jurisdiction in this District.

29.27. Intradistrict Assignment. A substantial part of the events and conduct which give rise to the claims herein occurred in Santa Clara County.

FACTUAL ALLEGATIONS REGARDING GOOGLE

I. Google Has a Long History of Invading Consumers' Privacy and Misrepresenting the Scope of Google's Data Collections

30.28. For at least the last decade, Google has been persistently and pervasively violating consumers' privacy rights. The pattern is always the same. Google gets caught. Google gets punished. Google lulls consumers into a false sense of security again.

31-29. In 2010, the FTC charged that Google “used deceptive tactics and violated its own privacy promises to consumers when it launched its social network, Google Buzz.” To resolve these claims, Google, in 2011, agreed to the FTC’s entry of a binding Order (the “Consent Order”), which barred Google “from future privacy misrepresentations” and required Google “to implement a comprehensive privacy program.”² The Consent Order also required Google to take steps relating to “covered information,” defined as “information [Google] collects from or about an individual.”³ The FTC ordered as follows:

I.

IT IS ORDERED that [Google], in or affecting commerce, shall not misrepresent in any manner, expressly or by implication:

A. the extent to which [Google] maintains and protects the privacy and confidentiality of any covered information, including, but not limited to, misrepresentations related to: (1) the purposes for which it collects and uses covered information, and (2) the extent to which consumers may exercise control over the collection, use, or disclosure of covered information...⁴

² *FTC Charges Deceptive Privacy Practices in Googles Rollout of Its Buzz Social Network*, FED. TRADE COMM’N (Mar. 30, 2011), <https://www.ftc.gov/news-events/press-releases/2011/03/ftc-charges-deceptive-privacy-practices-googles-rollout-its-buzz> (last visited Nov. 11, 2020).

³ The term “covered information” thus includes, but is not limited to, “(c) online contact information, such as a user identifier . . . (d) persistent identifier, such as IP address . . . (g) physical location; or any other information from or about an individual consumer that is combined with (a) through (g) above.”

⁴Agreement Containing Consent Order, *In re Google Inc.*, No. 1023136 (F.T.C.), <https://www.ftc.gov/sites/default/files/documents/cases/2011/03/110330googlebuzzagreeorder.pdf> (emphasis added).

II.

1 **IT IS FURTHER ORDERED** that [Google], prior to any new or
 2 additional sharing by respondent of the Google user's identified
 3 information with any third party, that: 1) is a change from stated
 4 sharing practices in effect at the time respondent collected such
 5 information, and 2) results from any change, addition, or
 6 enhancement to a product or service by respondent, in or affecting
 7 commerce, shall:

8 A. Separate and apart from any final "end user license agreement,"
 9 "privacy policy," "terms of use" page, or similar document, clearly
 10 and prominently disclose: (1) that the Google user's information
 11 will be disclosed to one or more third parties, (2) the identity or
 12 specific categories of such third parties, and (3) the purpose(s) for
 13 respondent's sharing; and

14 B. Obtain express affirmative consent from the Google user to such
 15 sharing.

16 32,30. Google quickly recidivated. Just one year after entry of the Consent Order, the FTC
 17 found that Google had already violated it. In an August 2012 press release, the FTC explained that
 18 Google had been promising users of Apple's Safari web browser that Google would not track their
 19 web browsing, and that Google had then broken those promises by "circumventing the Safari
 20 browser's default cookie-blocking setting":

21 Google Inc. has agreed to pay a record \$22.5 million civil penalty to
 22 settle Federal Trade Commission charges that it misrepresented to
 23 users of Apple Inc.'s Safari Internet browser that it would not place
 24 tracking "cookies" or serve targeted ads to those users, violating an
 25 earlier privacy settlement between the company and the FTC.

26 The settlement is part of the FTC's ongoing efforts make sure
 27 companies live up to the privacy promises they make to consumers,
 28 and is the largest penalty the agency has ever obtained for a violation
 29 of a Commission order. In addition to the civil penalty, the order
 30 also requires Google to disable all the tracking cookies it had said it
 31 would not place on consumers' computers.

32 "The record setting penalty in this matter sends a clear message to
 33 all companies under an FTC privacy order," said Jon Leibowitz,
 34 Chairman of the FTC. "No matter how big or small, all companies
 35 must abide by FTC orders against them and keep their privacy
 36 promises to consumers, or they will end up paying many times what

1 it would have cost to comply in the first place.”⁵

2 33.31. Since 2012, a number of federal, state, and international regulators have similarly
 3 accused Google of violating its data-collection and privacy promises, with Google failing to
 4 disclose and obtain consent for its conduct.

5 34.32. In January 2019, France’s data privacy authority, known as the CNIL, fined Google
 6 \$57 million for privacy violations. The violations related to: Google’s lack of transparency
 7 regarding its data collection practices; Google’s lack of valid consent from consumers; and the
 8 failure of Google’s privacy settings to enable consumers to exercise real control over what Google
 9 collected.⁶ In June 2020, France’s highest court upheld this \$57 million fine against Google, noting
 10 Google’s failure to provide clear notice and obtain users’ valid consent to process their personal
 11 data for ad personalization purposes on the Android mobile operating system. Google responded
 12 by stating that it had “‘invested in industry-leading tools’ to help its users ‘understand and control
 13 how their data is used.’”⁷

14 35.33. In September 2019, Google and its YouTube subsidiary agreed to pay \$170 million
 15 to settle allegations by the FTC and the New York Attorney General that YouTube illegally
 16 collected personal information from children without their parents’ consent.⁸

17 36.34. There are ongoing proceedings by the Arizona Attorney General and the Australian
 18 Competition and Consumer Commission alleging that Google failed to obtain consent regarding
 19 its collection of location data and regarding its practices of combining certain user data.

21 ⁵ *Google Will Pay \$22.5 Million to Settle FTC Charges It Misrepresented Privacy Assurances to*

1 37.35. In the Arizona Attorney General action, Google has produced documents
 2 establishing “overwhelming” evidence that “Google has known that the user experience they
 3 designed misleads and deceives users.” Google’s employees made numerous admissions in
 4 internal communications, recognizing that Google’s privacy disclosures are a “mess” with regards
 5 to obtaining “consent” for its data-collection practices and other issues relevant in this lawsuit.
 6 Some of these documents were made publicly available on August 21, 2020 (ironically, with heavy
 7 privacy redactions by Google).

8 38.36. Some of the documents produced by Google in the Arizona Attorney General action
 9 refer to Google’s “Web & App Activity” feature by name. These documents indicate that Google
 10 has long known that Google’s disclosures about this feature were (at a minimum) highly confusing
 11 and insufficient to allow consumers to give informed consent. *See infra*, ¶¶ 77–78–79.

12 39.37. In an ongoing Australia proceeding, the Australian Competition & Consumer
 13 Commission (“ACCC”) alleges that “Google misled Australian consumers to obtain their consent
 14 to expand the scope of personal information that Google could collect and combine about
 15 consumers’ internet activity, for use by Google, including for targeted advertising.” The ACCC
 16 alleges that Google impermissibly combined the data it collected directly from consumers with
 17 data that it received from “third-party sites and apps not owned by Google.” The ACCC contends
 18 that Google “misled Australian consumers about what it planned to do with large amounts of their
 19 personal information, including internet activity on websites not connected to Google.”⁹

20 **II. Google Uses Firebase SDK to Surreptitiously Collect Users’ Communications with
 21 Third-Party Apps**

22 40.38. Mobile “apps” (shorthand for “applications”) are software programs that run on
 23 mobile devices (e.g., smart phones, tablets).

24 41.39. Throughout the Class Period, the overwhelming majority of apps running on Class

25
 26 ⁹ *Correction: ACCC Alleges Google Misled Consumers About Expanded Use of Personal Data*,
 27 AUSTRALIAN COMPETITION & CONSUMER COMM’N (July 27, 2020),
 28 <https://www.accc.gov.au/media-release/correction-accc-alleges-google-misled-consumers-about-expanded-use-of-personal-data#:~:text=The%20ACCC%20has%20launched%20Federal,Google%2C%20including%20for%20targeted%20advertising> (last visited Nov. 11, 2020).

1 members' mobile devices have been third-party apps, meaning apps designed, developed, coded,
 2 and released by third-party developers. Google did not own or directly control these third-party
 3 developers.

4 42.40. Firebase SDK is a suite of software development tools that Google has owned and
 5 maintained throughout the Class Period. Firebase SDK is intended for use by third-party software
 6 developers, including developers of third-party apps for mobile devices. SDK stands for "software
 7 development kit." Google calls Firebase SDK a "comprehensive app development platform."
 8 Google states that Firebase SDK allows developers to "build apps fast, without managing
 9 infrastructure," and that it is "one platform, with products that work better together."¹⁰

10 43.41. On May 20, 2016, Jason Titus, Vice President of Google's Developer Products
 11 Group, stated that more than 450,000 software developers were using Firebase SDK.

12 44.42. Throughout the Class Period, Google made significant efforts to coerce app
 13 developers to use Firebase SDK. For example:

14 a. Google requires third-party developers to use Firebase SDK in order to use
 15 the Google Analytics service to gain information about customers' use of the app;¹¹

16 b. Google requires third-party developers to use Firebase SDK in order to use
 17 Google's "ad exchange" services such as AdMob; and make the app pages searchable on Android
 18 devices;

19 ed. Google requires third-party developers to use through Firebase SDK in order
 20 to use provides support for Google's "Play Store" as a platform on which to third-party app
 21 developers distribute their app to consumers and to process payments in the app.

22 45.43. As a result of Google's coercive practices, more than 1.5 million apps currently use
 23 Firebase SDK. That includes the vast majority of third-party apps that are currently in use on

24
 25 ¹⁰ See FIREBASE, <https://firebase.google.com/> (last visited Nov. 11, 2020).

26 For Android, see *Mobile App Reporting in Google Analytics - Android*, GOOGLE ANALYTICS,
 27 <https://developers.google.com/analytics/devguides/collection.firebaseio/android> (last visited Nov.
 28 11, 2020) ("App reporting in Google Analytics is natively integrated with Firebase, Google's app
 developer platform . . ."). For Apple iOS, see *Mobile App Reporting in Google Analytics - iOS*,
 GOOGLE ANALYTICS, <https://developers.google.com/analytics/devguides/collection.firebaseio/ios> (last visited Nov. 11, 2020) (also stating that "[a]pp reporting in Google Analytics is natively
 integrated with Firebase, Google's app developer platform . . .").

1 mobile devices that run Google's Android operating system. The third-party apps utilizing
 2 Firebase SDK include, for example, The New York Times, Duolingo, Alibaba, Lyft, Venmo, and
 3 The Economist.¹²

4 46.44. Google has embedded secret software scripts (bits of code) within Firebase SDK.
 5 These scripts cause the apps toThe Firebase SDK scripts copy and transmit to Google's servers in
 6 California many different kinds of user communications between app users on the one hand and,
 7 on the other hand, the app and the persons and entities who maintain the app (typically, the app's
 8 owners and developers¹²), by overriding device and account level controls.

9 47.45. All of these communications qualify as "covered information" for purposes of the
 10 2011 FTC Consent Order, and these communications contain personally identifiable information.
 11 These communications contain information relating to: (1) who the user is; (2) where the user is
 12 physically located; (3) what content the user has requested from the app; (e.g., the app page URL);
 13 (4) what content the user has viewed on the app; and (5) much other information relating to the
 14 user's interaction with the app.

15 48.46. The Firebase SDK scripts cause the appsdevice to intercept these communications
 16 and send surreptitious copies of them to Google even if the user is not engaged with any Google
 17 site or functionality; even if the user is not logged in to his or her Google account; and even if the
 18 user has "turned off" the "Web & App Activity" feature. From the apps, the Firebase SDK then
 19 overrides the mobile device level controls, and causes the device to transmit the intercepted
 20 browsing data. Importantly, Google cannot receive this data without overriding device level
 21 settings, because the devices ultimately transmit and receive data, sitting between the user using
 22 the app, and the app server in the mobile cloud.

23 49.47. The Firebase SDK scripts do *not* cause the apps to give any notice to the user that
 24 the appsscripts are surreptitiously copying the communications and sending those copies to
 25 Google.

26 50.48. These Firebase SDK scripts work on all mobile devices running all the major

27
 28 ¹² FIREBASE, <https://firebase.google.com/> (last visited Nov. 11, 2020).

1 operating systems—not just the Android system, but also Apple’s iOS and many others.
 2 Specifically on Android OS, Google surreptitiously collects the app-browsing data through the
 3 Android GMS process, overriding device level controls.

4 51.49. To take just one example of the kind of communication that the Firebase SDK
 5 scripts intercept, secretly copy, and transmit to Google, even when the user has exercised their
 6 privacy controls: When a user selects a link to an article within The New York Times app on the
 7 user’s phone, that selection generates a communication from the users’ phone to The New York
 8 Times’ servers. The New York Times’ servers respond to the communication by transmitting data
 9 to the user’s phone—the article, which then appears in the app. For users that have elected to not
 10 allow Google to track their app-browsing activity via their privacy controls, without disclosure or
 11 consent, Google (by means of the Firebase SDK scripts) intercepts the app user’s request for that
 12 content, surreptitiously copies the request, and then while overriding device and account level
 13 controls simultaneously transmits itthe browsing data to Google servers in California, where it is
 14 compiled with other data Google has collected and stored about that user. The interception and
 15 collection process runs vice versa as well, such as when the user is communicating back to the app
 16 publisher’s server request via his or her mobile device.

17 52.50. Google’s own documentation states that the Firebase SDK scripts allow Google to
 18 “[l]og the user’s interactions with the app, including viewing content, creating new content, or
 19 sharing content.”¹³ The Firebase SDK scripts also allow Google to identify certain “actions” that
 20 consumers take within an app, such as “viewing a recipe.” Thus, for example, Google’s Firebase
 21 documentation states that Firebase can “log separate calls” each time a consumer “view[s] a recipe
 22 (start) and then clos[es] the recipe (end).” (This Google documentation, however, does *not*
 23 disclose that these scripts transmit this information and surreptitious copies of the data to Google
 24 even when the user switches the “Web & App Activity” feature off. And the documentation

25
 26 ¹³ *Log User Actions*, FIREBASE, <https://firebase.google.com/docs/app-indexing/android/log-actions> (last visited Nov. 11, 2020).
 27
 28

1 certainly does not disclose that Firebase SDK would be used to circumvent device and account
 2 level settings.)

3 53.51. Firebase SDK uses the term “event” to describe a wide range of user activity with
 4 an app. For example: when the user views a new screen on the app, that event is called
 5 “screen_view.”¹⁴ When the user opens a notification sent via the app from the Firebase Cloud
 6 Messaging system, that event is called “notification_open.” And when the user selects content in
 7 the app, that event is called “select_content.”

8 54.52. The Firebase SDK scripts “automatically” copy and transmit (to Google)
 9 communications relating to at least 26 different kinds of events (including “screen_view” and
 10 “notification_open,” described above)., through the users’ device. The Firebase SDK scripts will
 11 “collect” these events “automatically,” meaning, even if the developer does not “write any
 12 additional code to collect these events.”

13 55.53. In addition to the 26 different “automatically collected events,” Firebase SDK
 14 permits app developers to code their apps to collect information about many more events
 15 (including “screen_view,” described above). Furthermore, Firebase SDK enables developers to
 16 create their own “custom events” to be tracked in their apps.¹⁵ Depending on how the app’s code
 17 is written, Firebase SDK may also secretly copy and transmit these and many additional events to
 18 Google’s servers, through the users’ device.

19 54. On Android OS, these intercepted messages are concurrently aggregated and
 20 facilitated by a background process called Google Mobile Service (GMS), which aggregates
 21 similarly intercepted messages across all the apps using Firebase SDK, so that user identity can be
 22 easily tracked across the apps, and so that browsing activity can be immediately associated and
 23 correlated for meaningful real-time context.

24 _____
 25 ¹⁴ See *Automatically Collected Events*, FIREBASE HELP, <https://support.google.com.firebaseio/answer/6317485?hl=en#:~:text=Automatically%20collected%20events%20%20%20%20Event%20name,currency%2C%20quan%20...%20%2023%20more%20rows%20> (last visited Nov. 11, 2020).

26 ¹⁵ *Google Analytics 4 Properties Tag and Instrumentation Guide*, GOOGLE ANALYTICS, <https://developers.google.com/analytics/devguides/collection/ga4/tag-guide> (last visited Nov. 11, 2020).

1 56.55. Firebase SDK associates almost every kind of event with one or more specific
 2 pieces of information, called “parameters.” For example: when the user views a new screen (event:
 3 “screen_view”), the Firebase SDK scripts ~~secretly~~ copy and transmit through the device at least
 4 seven different parameters to Google including “firebase_screen_id” and
 5 “engagement_time_msec.” When the user opens a notification (event: “notification_open”), then
 6 the Firebase SDK scripts ~~secretly~~ copy and transmit at least seven parameters to Google including
 7 “message_name,” “message_time,” “message_id,” “topic,” and “label.” And when the user selects
 8 content in the app (event: “select_content”), then the Firebase SDK scripts ~~secretly~~ copy and
 9 transmits through the device at least two parameters: “content_type” and “item_id.”

10 57.56. The Firebase SDK scripts “automatically” copy and transmit five basic
 11 “parameters” about all events. These five automatically transmitted parameters are: “language”;
 12 “page_location”; “page_referrer”; “page_title”; and “screen_resolution.”¹⁶ According to Google,
 13 these five parameters are “collected by default with every event.” This means that every time the
 14 user interacts with an app (in any sort of event), Firebase records that interaction by copying and
 15 transmitting to Google’s servers through the device at least those five parameters.

16 58.57. Focusing just on the three of the five “parameters” that Google “automatically”
 17 transmits: the “page_title” parameter informs Google what the user is viewing; the “page_referrer”
 18 parameter informs Google whether the user arrived at that page from another place where Google
 19 has a tracker (and if so, the identity of that other place); and the “page_location” parameter informs
 20 Google of the URL address (e.g., internet address) of the content the user is viewing on his or her
 21 device.

22 59.58. Google does not notify its users of these ~~secret~~-Firebase SDK scripts and how
 23 Google actually uses them, which cause the copying and duplication of browsing data to be sent
 24 to Google, for at least Google Analytics for Firebase, [REDACTED].

25
 26 ¹⁶ *Automatically Collected Events*, FIREBASE HELP,
 27 <https://support.google.com/firebase/answer/6317485?hl=en#:~:text=Automatically%20collected%20events%20%20%20%20Event%20name,currency%2C%20quan%20...%20%202023%20more%20rows%20> (last visited Nov. 11, 2020).

1 These scripts are hidden from users and run without any notice to users of the interception and
 2 data collection [even when they exercise their device level controls](#), which exceeds all contemplated
 3 and authorized use of the users' data. [All of these Firebase SDK products surreptitiously provide](#)
 4 [app browsing data to Google on mobile devices, overriding their device level controls, including](#)
 5 [through background processes such as Android GMS.](#)

6 [60.59.](#) Users have no way to remove these Firebase SDK scripts or to opt-out of this data
 7 collection. Google intentionally designed these scripts in such a way as to render ineffective any
 8 barriers users may attempt to use to prevent access to their information, including by turning off
 9 the "Web & App Activity" feature.

10 #

11 #

12 #

13 **III. Users Turned off the "Web & App Activity" Feature to Prevent Google from
 14 Collecting Users' Communications with Third-Party Apps, but Google Continued
 15 Without Disclosure or Consent to Intercept Those Communications**

16 **A. Google's "Web & App Activity" Feature**

17 60. In or before 2015, Google launched the "Web & App Activity" feature.

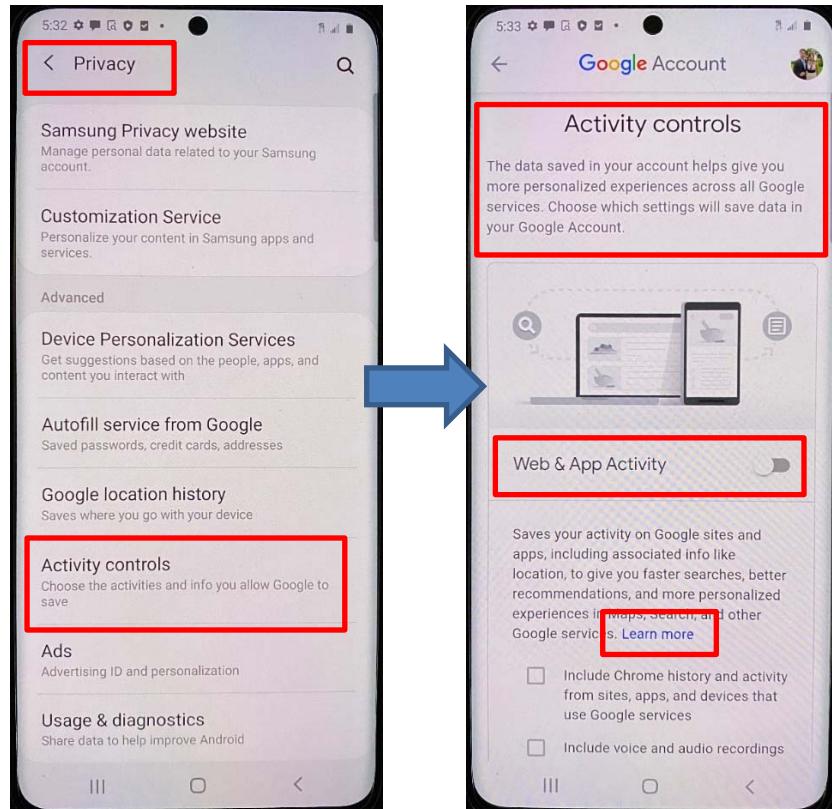

18 61. Throughout the Class Period, users have been able to access the Web & App
 19 Activity feature in at least two ways: through Google's website, and through the "Settings" menu
 20 of a mobile device running [Google's Android operating system](#)[Android OS. Google presented](#)
 21 [such settings to their business partners as device level controls, including by requiring the controls](#)
 22 [and accompanying representations written by Google as part of the Android OS, as licensed to](#)
[Android device manufacturers, such as Samsung.](#)

23 62. To access the "Web & Activity" feature through Google's website, a user would
 24 direct his or her web browser to Google's My Activity website (and previously Google's My
 25 Account website), and would then log on with their Google account credentials. The first screen
 26 of the My Activity website displays, among other options, the "Web & App Activity" feature. By
 27 clicking on the words "Web & App Activity," the user is taken to a second screen, which displays
 28 the image of a switch beside the words "Web & App Activity." The user can then toggle the switch

1 “off” to turn off the “Web & App Activity” feature.¹⁷

2 63. To access the “Web & Activity” feature through a mobile device running Google’s
3 Android operating system, the user would use the phone’s “Settings” application. For example,
4 on a Samsung phone running the Android system, the “Settings” application includes a section
5 entitled “Privacy Controls.” (Shown in “Screen 1,” below.) Within that “Privacy Controls” menu,
6 the user can select “Activity Controls,” which would open a new screen. (Shown in “Screen 2,”
7 below.) In that second “Activity Controls” screen, the phone displays the image of a switch beside
8 the words “Web & App Activity.” The user can then toggle the switch “off” to turn off the “Web
9 & App Activity” feature.

27
28 ¹⁷ Google previously offered the option to “pause” Web & App Activity. “Pausing” this feature
likewise did not stop the Google interception, data collection, and use at issue in this lawsuit.

64. Google simultaneously tracks the user's setting of the "Web & App Activity" feature (whether "on" or "off") across all Google's services and devices in real time. Thus, if a user turns off "Web & App Activity" in the user's phone, then that change will also be reflected when the user logs on to Google's "My Activity" website using the user's laptop. Similarly, if a user then uses the laptop to turn "Web & App Activity" back "on," using the "My Activity" website, then this feature will also be turned "on" in the user's Android phone "Settings" application.

65. However, contrary to Google's disclosures (described below), turning off the "Web & App Activity" feature actually does nothing to stop Google from receiving, collecting, and using the data transmitted to Google by the ~~secret~~-Firebase SDK scripts. Those surreptitious transmissions are, without disclosure or consent, unaffected by the "Web & App Activity" ~~switch~~ feature.

¹⁸ The highlighted language from this screen is part of the OS language written by Google.

B. Google’s Privacy Policy and “Learn More” Disclosures Stated That the “Web & App Activity” Feature Stops Google from “Saving” Users’ Data

65-66. Throughout the Class Period, Google stated that turning “off” the “Web & App Activity” feature would prevent Google from collecting users’ app activity, including users’ communications made via apps. Google’s statements appeared in at least three places: Google’s “Privacy Policy”; Google’s “Privacy and Security Principles”; and Google’s “Learn More” disclosures relating to the “Web & App Activity” feature.

1. Google’s “Privacy Policy” and “Privacy and Security Principles” Stated That Users Could “Control” What Google Collects

66.67. Throughout the Class Period, Google’s Privacy Policy has defined “Google services” to include Google products that, like Firebase SDK, are “integrated into third-party apps.” The first page of Google’s Privacy Policy states:

Our services include: . . . Products that are integrated into third-party apps and sites, like ads and embedded Google Maps

Ex. A at 1 (Privacy Policy).

67.68. From at least May 25, 2018, to the present, Google’s Privacy Policy has promised users that “*across our services, you* can adjust your privacy settings to *control what we collect and how your information is used.*” *Id.* (emphasis added).¹⁹ Earlier versions of Google’s Privacy Policy included similar representations.²⁰

¹⁹ See Privacy Policy, GOOGLE PRIVACY & TERMS, <https://policies.google.com/privacy> (last visited Nov. 11, 2020). Google included this same statement—“you can adjust your privacy settings to control what we collect and how your information is used”—in versions of its Privacy Policy dated May 25, 2018, January 22, 2019, October 15, 2019, December 19, 2019, March 31, 2020, July 1, 2020, August 28, 2020, and September 30, 2020. *Id.*

²⁰ The Google Privacy Policies effective between August 19, 2015 and May 24, 2018 included a section titled “Transparency and choice.” That section states that Google’s “goal is to be clear about what information we collect, so that you can make meaningful choices about how it is used” and directs users to “[r]eview and update your Google activity controls to decide what types of data, such as videos you’ve watched on YouTube or past searches, you would like saved with your account when you use Google services.” Also included in the “Transparency and choice” section is the statement that users can “[c]ontrol who you share information with through your Google Account.” See Aug. 19, 2015 Google Privacy Policy; Mar. 25, 2016 Google Privacy Policy; June 28, 2016 Google Privacy Policy; Aug. 29, 2016 Google Privacy Policy;

(Footnote Continued on Next Page.)

1
2 68.69. Throughout the Class Period, Google’s Privacy Policy has told users that they can
3 “control data” by using Google’s “My Activity” website. (As described above, “My Activity” is
4 the website that users can access in order to switch “Web & App Activity” off.) The Privacy
5 Policy states: “My Activity allows *you to* review and **control data that’s created when you use**
6 **Google services . . .**” Ex. A at 9 (Privacy Policy) (emphasis added).

7 69.70. Google also stated in its “Privacy and Security Principles,” displayed on its “Safety
8 Center” website,²¹ that Google would: “[r]espect our users” and “their privacy”; “[b]e clear about
9 what data we collect”; “make it easy to understand what data we collect”; and “[m]ake it easy for
10 people to control their privacy.” Google further stated, in these Privacy and Security Principles:
11 “Every Google Account is built with on/off data controls, so our users can choose the privacy
12 settings that are right for them.” Google promised to “ensur[e] that privacy is always an individual
13 choice that belongs to the user.” These “principles” have been part of Google’s successful efforts
14 to lull users, app developers, and others into a false sense of user control and privacy.

15 **2. Google’s “Learn More” Disclosures with Respect to “Web & App
16 Activity” Explained That Turning the Feature off Would Prevent
17 Google from Saving Information Related to Third Party Apps**

18 70.71. As described above, Google’s “My Activity” website is one of two ways users can
19 switch off “Web & App Activity.” That website contains a hyperlink with the words “Learn
20 more,” located below the on/off switch for “Web & App Activity.” When users click on this
21 “Learn more” hyperlink, their browser then displays a new webpage entitled “See & Control your
22 Web & App Activity.”²² On that page, during the Class Period, Google made the following
disclosures:

23
24
25 Mar. 1, 2017 Google Privacy Policy; Apr. 17, 2017 Google Privacy Policy; Oct. 2, 2017 Google
26 Privacy Policy; Dec. 18, 2017 Google Privacy Policy (this policy was effective until May 24,
27 2018).

28 ²¹ *Our Privacy and Security Principles*, GOOGLE SAFETY CENTER,
<https://safety.google/principles/> (last visited Nov. 11, 2020).

29 ²² *See & Control Your Web & App Activity*, GOOGLE SEARCH HELP, https://support.google.com/websearch/answer/54068?visit_id=6372555086257257422105376128&hl=en&rd=1 (last visited Nov. 11, 2020).

1 **SEE & CONTROL YOUR WEB & APP ACTIVITY**
2
34
5 You can turn Web & App Activity off or delete past activity at any time...
67 **I. What's saved as Web & App Activity...**
89

[Info about your browsing and other activity on sites, apps, and devices that
use Google services](#)

1011 When Web & App Activity is on, you can include additional activity like:
1213

- Sites and apps that partner with Google to show ads
- Sites and apps that use Google services, including data that apps share with Google
- Your Chrome browsing history
- Android usage & diagnostics, like battery level and system errors

1415 *To let Google save this information:*
1617

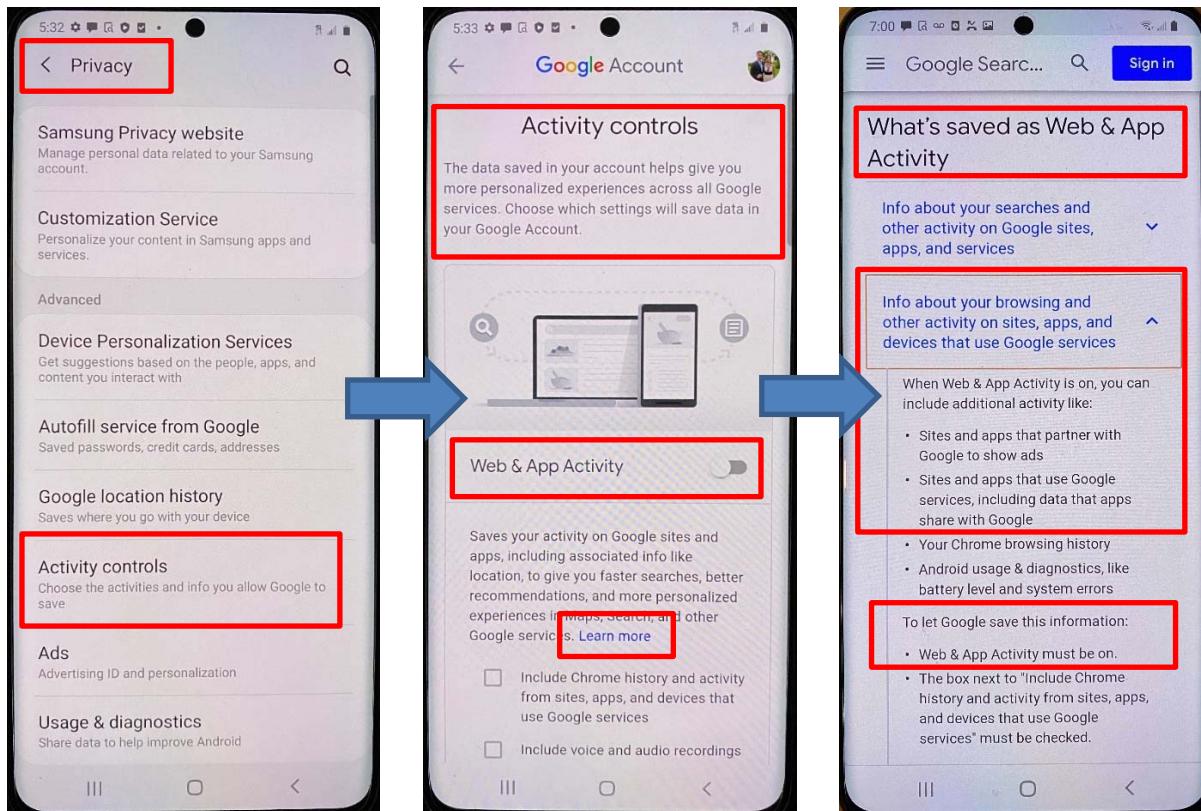

- *Web & App Activity must be on.*
- The box next to “Include Chrome history and activity from sites, apps, and devices that use Google services” must be checked.

1819 *Id.* (emphases added). This is a plain and direct statement to users that the switch for “Web & App Activity” “must be on” “[t]o let Google save this information,” including “[i]nfo about” the users’ “activity on sites, apps, and devices that use Google services.” *Id.* “Google services” includes, of course, Firebase SDK, and hundreds of thousands of apps use this “service.” Google’s own Privacy Policy defines the term “Google service” to include Firebase SDK. Ex. A at 1 (Privacy Policy) (“*Our services include: . . . products that are integrated into third-party apps . . .*”).
2021 71.72. Google’s “Learn More” disclosures on the Android “settings” screens also stated
22 that turning the Web & App Activity feature off would prevent Google from “sav[ing]”
23 information related to third-party apps. As described above, users with devices running Google’s
24 Android operating system have an additional means of switching the “Web & App Activity”
25 feature off—namely, they can do this using the “Activity Controls” section of the “Privacy” menu
26 within these devices’ “Settings” application. *Supra*, ¶ 6263. This section also contains a “Learn
27 more” hyperlink (see bottom of Screen 2, below) which, if selected, opens a web browser
28 application on the device and displays to the user the same webpage, entitled “See & Control your
Web & App Activity,” within Google’s “My Activity” website. *Supra*, ¶ 7071 (describing and

1 quoting this webpage). (Screen 3, below, shows a screenshot of part of this webpage as displayed
 2 on the device.)

3 #

4 #

18 SCREEN 1

19 SCREEN 2

20 SCREEN 3

21 72.73. In Screen 1, the user is promised that the “Activity controls” will enable the user to
 22 “[c]hoose the activities and info you allow Google to save.”

23 73.74. In Screen 3, after selecting “Learn more,” the user is told that “To let Google save
 24 this information: Web & App Activity must be on.”

25 74.75. Thus, users who used their Android “Settings” application to learn more about the
 26 “Web & App Activity” feature received the same misleading disclosures as did users who visited
 27 the “My Activity” website.

28 75.76. Based on Google’s disclosures described and quoted above, Plaintiffs and Class
 29 members had the objectively reasonable belief that Google would stop collecting their
 30 communications and other interactions with apps on their phones—“across [Google’s] services”—

1 if the users turned the “Web & App Activity” ~~feature’s~~ switch to “off.”

2 ~~76.77.~~ Plaintiffs and Class members could not possibly have consented to Google’s
 3 collection of their communications and other interactions with apps on their ~~phones~~mobile devices
 4 when they turned the “Web & App Activity” switch to off.

5 **3. Google Knew That Its Disclosures Led Users to Believe That Turning
 6 “Web & App Activity” off Would Prevent Google from Collecting
 7 Communications with Apps**

8 ~~77.78.~~ As a result of the Arizona Attorney General’s ongoing investigation (*see supra*,
 9 ¶¶ 34–36), several heavily redacted internal Google documents have been made public. These
 10 documents refer to Google’s “Web & App Activity” feature and its on/off switch. The documents
 11 indicate that Google’s own employees understood that Google’s disclosures to consumers,
 12 regarding this switch, misled consumers into believing, wrongly, that turning the switch “off”
 13 would prevent Firebase SDK from transmitting users’ communications to Google. For example:

14 a. On February 2, 2017, one Google employee (name redacted by Google for
 15 privacy reasons) referenced “work in progress” at Google “trying to rein in the overall mess that
 16 we have with regards to data collection, consent, and storage.” This was in response to another
 17 Google employee (name redacted by Google for privacy reasons), asking a question regarding
 18 whether “users with significant privacy concerns understand what data we are saving?” Another
 19 Google employee (name redacted by Google for privacy reasons) stated that this area was “super
 20 messy” and users needed to “make sense out of this mess.” The “overall mess” with Google’s data
 21 collection and consent described in these documents includes the Web & App Activity feature.

22 b. On August 13, 2018, one Google employee (name redacted by Google for
 23 privacy reasons) referenced “Web/App Activity” and commented that the “current UI [user
 24 interface] feels like it is designed to make things possible, yet difficult enough that people won’t
 25 figure it out.” The Google employee also noted that selections were “defaulted to on, silently
 26 appearing in setting menus you may never see is <redacted>.” These internal Google comments
 27 specifically addressed Web & App Activity, characterizing Web & App Activity as something
 28 “difficult enough” that users “won’t figure it out.”

c. On August 14, 2018, one Google employee (name redacted by Google for privacy reasons) referenced Web & App Activity, stating “I did not know Web and App activity had anything to do with location. And seems like we are not good at explaining this to users.” Another Google employee (name redacted by Google for privacy reasons) added: “Definitely confusing from a user point of view if we need googlers [to] explain it to us[.]” Google employees recognized Google was “not good” (perhaps intentionally so) at explaining the Web & App Activity feature.

d. One heavily redacted 2017 Google presentation concerns a study that specifically focused, at least in part, on “Consent” and asked, “Do users comprehend what will happen if they turn on the Web & App activity setting . . . ?” The presentation includes a lengthy, but mostly redacted, section of “Detailed findings.” Those findings state that “Participants had difficulty [redacted]” and that the “effect of the activity of the Web & App Activity [redacted].”

78.79. On information and belief, unredacted versions of those documents and other internal Google documents will further confirm that not even Google believes its users had consented to Google’s interceptions between users and apps when “Web & App Activity” was switched off.

4. **Google’s Passing Reference to “Your Google Account” Does Not Constitute Consent**

79.80. During the Class Period, Google made much of its commitment to privacy. For example, Google's CEO promised consumers, in a *New York Times* op-ed, that “[t]o make privacy real, we give you clear, meaningful choices around your data.”²³

80.81. Now faced with this lawsuit compelling it to honor these claims, Google has abandoned this commitment to clear and meaningful choices, instead contending that its Privacy Policy and promises were a ruse.

81.82. Google’s first motion to dismiss contended—incorrectly and incredibly—that the “Learn more” disclosures described above somehow told users that Google would continue to

²³ Sundar Pichai, *Google's Sundar Pichai: Privacy Should Not Be a Luxury Good*, THE NEW YORK TIMES (May 7, 2019), available at <https://www.nytimes.com/2019/05/07/opinion/google-sundar-pichai-privacy.html> (last visited Nov. 11, 2020).

1 intercept, copy, collect and save their communications with apps, even when the “Web & App
 2 Activity” feature was turned “off.” Google’s motion relied on the words “saved in your Google
 3 Account,” taken from a single sentence in the “See & Control your Web & App Activity” page:

4 If Web & App Activity is turned on, your searches and activity from
 5 other Google services are *saved in your Google Account*, so you
 6 may get more personalized experiences, like faster searches and
 7 more helpful app and content recommendations.

8 Google argued that the words “saved in your Google Account” conveyed to users that the “Web
 9 & App Activity” on/off switch was meaningless—that it would not do precisely what Google’s
 10 Privacy Policy (and the rest of the “Learn More” hyperlinked page) says that the switch would do.
 11 Rather, these five words, according to Google, indicate that the “off” switch has all the effect of a
 12 light switch during a blackout: The switch merely toggles off what data Google will *display for*
 13 *the user* in the user’s “account.” To state this contention plainly reveals how outlandish it is. Over
 14 and over again Google’s Privacy Policy and “Learn more” disclosures told users that the “Web &
 15 App Activity” feature switch would “control” what “Google saves”; “what we collect”; and “how
 16 your information is used”—across “Google services.” The five words highlighted by Google do
 17 nothing to diminish Google’s promises.

18 82.83. Google’s reliance on these five words is particularly weak because Google itself,
 19 in many other disclosures, told users that Google promised to “Be clear about what data we collect
 20 and why. To help people make informed decisions about how they use Google products, we make
 21 it easy to understand what data we collect, how it’s used, and why. Being transparent means
 22 making this information readily available, understandable, and actionable.”²⁴ *See infra, ¶¶ 85–*
 23 10386–104 (collecting such public statements by Google). Google’s made-for-litigation
 24 argument, relying on a passing reference to “activity” being “saved in your Google account,” is
 25 not the kind of “easy to understand” and “transparent” disclosure Google elsewhere promised to
 26 its users.

27 83.84. Google’s argument is wrong for another reason, too: This sentence refers only to

28 ²⁴ *Our Privacy and Security Principles*, Google Safety Center, <https://safety.google/principles/>
 (last visited Nov. 11, 2020).

1 what happens if “Web & App Activity *is turned on.*” Nothing in this sentence limits Google’s
 2 repeated promises, quoted above, about what would happen when users turned Web & App
 3 Activity *off*. Plaintiffs and the Class members were never told about and were harmed by Google’s
 4 continued interceptions and collections of data during the times when they turned the switch *off*.

5 84.85. Critically, nowhere in any disclosures did Google ever state that it would continue
 6 to collect users’ communications with apps when the “Web & App Activity” feature was turned
 7 off. Because nothing in the Privacy Policies or other disclosures state that Google intercepts
 8 communications between users and apps when “Web & App Activity” is turned off, the notion
 9 that users and apps consented to this practice is absurd—one cannot consent to what one does not
 10 know.

11 **C. Google Obscured Its Collection of These Communications Without Consent
 12 Through Its “Pro-Privacy” Campaigns and Other Public Statements**

13 85.86. In addition to the Privacy Policy and “Learn More” disclosures, described above,
 14 Google masked its unauthorized data collection practices (including specifically Google’s practice
 15 of receiving, collecting, and saving the Firebase SDK transmissions while users had switched off
 16 the “Web & App Activity” feature) through various “pro-privacy” campaigns and other public
 17 statements.

18 86.87. On June 1, 2015, Google Product Manager of Account Controls and Settings,
 19 Guemmy Kim, published an article titled “Keeping your personal information private and safe—
 20 and putting you in control.”²⁵ The article states that “Google builds simple, powerful privacy and
 21 security tools that keep your information safe and put you in control of it,” such as the “new hub”
 22 called “My Account” (which at that time included the Web & App Activity feature that is at issue
 23 in this lawsuit). This article told users that “My Account gives you quick access to the settings
 24 and tools that help you safeguard your data, protect your privacy, and decide what information is
 25 used to make Google services work better for you.” The article stated that users can “[m]anage
 the information” that Google “use[s]” from Google “products.” As an example of how users can

27 ²⁵ Guemmy Kim, *Keeping Your Personal Information Private and Safe—and Putting You in
 28 Control*, GOOGLE, THE KEYWORD (June 1, 2015), available at [https://blog.google/topics/safety-
 security/privacy-security-tools-improvements/](https://blog.google/topics/safety-security/privacy-security-tools-improvements/) (last visited Nov. 11, 2020).

1 control how Google uses their information, the article further represented that “you can turn on
 2 and off settings such as Web and App Activity.”

3 87.88. On June 1, 2016, Kim published another article titled “Celebrating My Account’s
 4 first birthday with improvements and new controls.” This article described Google’s My Account
 5 hub (which at that time included the Web & App Activity feature at issue in this lawsuit) as “a hub
 6 that gives you quick access to controls for safeguarding your data and protecting your privacy on
 7 Google.”²⁶ The article touted how Google’s tools “make it easy for you to control your privacy”
 8 and represented that when “you entrust your data to Google, you should expect powerful security
 9 and privacy controls.”

10 88.89. On September 8, 2017, Google Product Manager Greg Fair published an article
 11 titled “Improving our privacy controls with a new Google Dashboard” in which he touted how
 12 Google has “[p]owerful privacy controls that work for you” and emphasized that users had
 13 “control” over their information and tools “for controlling your data across Google.”²⁷ Mr. Fair
 14 specifically referenced the My Activity hub (formerly named “My Account”), which at that time
 15 included the Web & App Activity feature at issue in this lawsuit. Mr. Fair stated: “You—and only
 16 you—can view and control the information in My Activity.” After describing this privacy control,
 17 Mr. Fair boasted Google’s efforts in “[b]uilding tools that help people understand the data stored
 18 with their Google Account and control their privacy.”

19 89.90. On June 21, 2018, Google Product Manager, Jon Hannemann, published an article
 20 titled “More transparency and control in your Google Account” in which he wrote: “For years,
 21 we’ve built and refined tools to help you easily understand, protect, and control your information.
 22 As needs around security and privacy evolve, we will continue to improve these important tools

1 to help you control how Google works for you.”²⁸

2 90.91. On May 7, 2019, Google CEO Pichai published an op-ed in the *New York Times*,
 3 titled “Privacy Should Not Be a Luxury Good,” in which he stated that: “we [at Google] care just
 4 as much about the experience on low-cost phones in countries starting to come online as we do
 5 about the experience on high-end phones. Our mission compels us to take the same approach to
 6 privacy. For us, that means privacy cannot be a luxury good offered only to people who can afford
 7 to buy premium products and services.”²⁹ Mr. Pichai further stated that it is “vital for companies
 8 to give people clear, individual choices around how their data is used” and that Google focuses on
 9 “features that make privacy a reality — for everyone.” He continued: “To make privacy real, we
 10 give you clear, meaningful choices around your data.”³⁰

11 91.92. On the same date, May 7, 2019, Google CEO Pichai gave the keynote address at
 12 Google’s 2019 I/O developer conference. He stated: “[a]nother way we build for everyone is by
 13 ensuring that our products are safe and private, and that people have clear, meaningful choices
 14 around their data. We strongly believe that privacy and security are for everyone, not just a few.”
 15 The full text of his remarks was later published online.³¹ Mr. Pichai further stated that Google’s
 16 “products” are “built on a foundation of user trust and privacy.” He represented that Google
 17 “ensur[es] that our products are safe and private, and that people have clear, meaningful choices
 18 around their data.”³² Recognizing that “privacy and security are for everyone,” he also stated:
 19 “This is why powerful privacy features and controls have always been built into Google services.”
 20 Mr. Pichai specifically referenced the Web & App Activity control at issue in this lawsuit, touting
 21 how Google was launching the auto-delete functionality as an example of how users can access

32 *Id.*

1 “privacy controls” to “easily change your privacy settings.”

2 92.93. In August 2019 Google launched a “pro-privacy” campaign called “Privacy
3 Sandbox.” In this campaign, Google promotes itself as a champion of privacy and choice that
4 scrupulously respects the privacy of its users and is transparent about the data it collects.³³ The
5 blog post announcing this initiative declared to users that “Privacy is paramount to us, in
6 everything we do.”

7 93.94. Since the Privacy Sandbox campaign, Google has indicated that it will require rival
8 adtech companies using Google targeted advertising products to have their own consent directly
9 from the consumers, if the rival adtech companies are to track consumers directly. In response to
10 questions from regulators—such as those in the United Kingdom—regarding whether Google was
11 engaged in anticompetitive conduct, Google responded by indicating that it was protecting
12 consumer privacy.

13 94.95. On October 2, 2019, Google Director of Product Management, Privacy, and Data
14 Protection Office, Eric Miraglia, published an article titled “Keeping privacy and security simple,
15 for you” in which he represented that when it comes to “privacy and security,” “managing your
16 data should be just as easy as making a restaurant reservation.”³⁴ He emphasized how Google was
17 “rolling out more ways for you to protect your data” He referenced Web & App Activity,
18 stating that Google was allowing users to “automatically delete your Location History and Web &
19 App Activity, which includes things you’ve searched for and browsed.”

20 95.96. On December 19, 2019, Google Vice President of Product Privacy Rahul Roy-
21 Chowdhury published an article titled “Putting you in control: our work in privacy this year” in
22 which he represented that Google Account (which includes the Web & App Activity control at
23 issue in this lawsuit) is a “tool[] for users to access, manage and delete their data” and that Google

1 “let[s] you control how your information is used.”³⁵

2 96.97. On January 22, 2020, Google CEO Pichai stated that privacy “cannot be a luxury
3 good,” and claimed that “privacy” is “at the heart of what we do.”³⁶

4 97.98. On January 28, 2020, Google Vice President of Product Privacy Rahul Roy-
5 Chowdhury published an article titled “Data Privacy Day: seven ways we protect your privacy” in
6 which he identified the Web & App Activity feature and explained how Google’s auto-delete
7 functionality would allow users to “choose to have Google automatically and continuously delete
8 your activity and location history after 3 or 18 months. You can also control what data is saved to
9 your account with easy on/off controls in your Google Account, and even delete your data by date,
10 product and topic.”³⁷

11 98.99. On May 7, 2020, Google Director of Product Management, Privacy and Data
12 Protection Office, Eric Miraglia published an article titled “Privacy that works for everyone” in
13 which he wrote that “you should be able to understand and manage your data—and make privacy
14 choices that are right for you.”³⁸ He referenced the privacy features and controls at issue in this
15 lawsuit, with Web & App Activity, and wrote: “A few years ago, we introduced Google Account
16 to provide a comprehensive view of the information you’ve shared and saved with Google, and
17 one place to access your privacy and security settings. Simple on/off controls let you decide which
18 activity you want to save to your account” and you “can also choose which activities or categories
19 of information you want to delete.” He also touted the “new control” for “Web & App Activity”
20 with the auto-deletion of “your Location History and Web & App Activity data.

Nov. 11, 2020).

1 99.100. On June 24, 2020, Google CEO Sundar Pichai published an article titled “Keeping
 2 your private information private” in which he represented that “[p]rivacy is at the heart of
 3 everything we do” and that Google focuses on “putting you in control” and “working to give you
 4 control on your terms.”³⁹ Mr. Pichai specifically referenced Web & App Activity as part of those
 5 efforts to treat “your information responsibly” and stated that Google changed its default settings
 6 for “new accounts” so that “your activity data will be automatically and continuously deleted after
 7 18 months, rather than kept until you choose to delete it.”

8 100.101. On or about July 29, 2020, Google submitted written remarks to Congress
 9 for testimony by its current CEO Pichai (who helped develop Google’s Chrome browser), which
 10 stated: “I’ve always believed that privacy is a universal right and should be available to everyone,
 11 and Google is committed to keeping your information safe, treating it responsibly, and putting you
 12 in control of what you choose to share.”⁴⁰

13 101.102. On September 15, 2020, Google’s Global Partnership and Corporate
 14 Development President Donald Harrison stated during a Senate hearing that consent at times
 15 “appears confusing” but also represented that users “have control” and that Google wants “our
 16 users to be able to make a decision on how they control their data” He represented that
 17 “[u]sers own their data” and that users were “able to make a decision on how they control their
 18 data.”

19 102.103. The statements by Google and its key leaders, described above, were widely
 20 publicized to Google users by many different news outlets, which correctly interpreted these
 21 statements as claims, by Google, to be safeguarding users’ privacy.⁴¹ Google intended these

22

(Footnote Continued on Next Page.)

1 statements to communicate that Google's data-collection practices were more transparent, and
 2 more respectful of users' privacy, than were the practices of Google's competitors (e.g., Apple).

3 103-104. Google and its key leaders made the statements described above in order to
 4 obscure Google's intent to engage in widespread data collection without consent. These
 5 statements were intended to convey, and did convey, that Google did not intercept and collect
 6 users' data when the users had turned off the "Web & App Activity" feature.

7 **D. Third-Party App Developers Did Not Consent to Google Collecting Users'
 8 Communications with Third-Party Apps When "Web & App Activity" Was
 Turned off**

9 105. Third-party app developers who used Firebase SDK likewise did not consent to
 10 Google's interception of users' communications with apps when "Web & App Activity" was turned
 11 off. Throughout the Class Period, Google told these developers, in the service agreements, that
 12 Google: (1) would comply with its own Privacy Policy; (2) would provide app users with control
 13 over their data; and (3) would help the developers to comply with privacy laws and to protect
 14 consumers' rights over their data, such as consumers' rights to "access; rectification; restricted
 15 processing; [and] portability."

16 106. Google represented and continues to represent to app developers that Google will
 17 adhere to its own Privacy Policy. Specifically, Google states the following, on the Analytics Help
 18 page intended for use by app developers who use Firebase SDK:

19 //

20 //

21 //

22 //

23 //

4

Safeguarding your data

5 This article summarizes Google Analytics' data practices and commitment to protecting the confidentiality and
6 security of data. Visitors to sites or apps using Google Analytics (aka "users") may learn about our end user
7 controls.8 Site or app owners using Google Analytics (aka "customers") may find this a useful resource, particularly if they
9 are businesses affected by the [European Economic Area's General Data Protection Regulation](#), or [California's California Consumer Privacy Act](#). See also the [Google privacy policy](#) and Google's site for [customers and partners](#).10

Information for Visitors of Sites and Apps Using Google Analytics

11

[Our privacy policy](#)

12 At Google, we are keenly aware of the trust you place in us and our responsibility to keep your privacy
13 and data secure. As part of this responsibility, we let you know what information we collect when you
14 use our products and services, why we collect it, and how we use it to improve your experience. The
15 [Google privacy policy & principles](#) describes how we treat personal information when you use Google's
16 products and services, including Google Analytics.17 107. When any app developer clicks on the "Google privacy policy & principles" above,
18 they are taken to Google's Privacy Policy page—the same Privacy Policy page described above.
19 *Supra, ¶¶ 66-6867-69.*⁴² In its Privacy Policy, Google falsely stated to its users that "**across our services, you** [the user] can adjust your privacy settings to **control what we collect and how your information is used.**" As discussed above, Google's Privacy Policy also promises users that Google's "My Activity" website "allows you [the user] to review and control data that's created when you use Google services."20 108. Google also gave and gives assurances to app developers in its "Firebase Data Processing And Security Terms" that Google "will protect users' privacy."⁴³ The purpose of these21
22

23 ⁴² Google Privacy Policy, GOOGLE PRIVACY & TERMS,
<https://policies.google.com/privacy?hl=en>.24
25 ⁴³ Firebase Data Processing and Security Terms, FIREBASE,
<https://firebase.google.com/terms/data-processing-terms#9.-data-subject-rights;-data-export> (last visited Nov. 11, 2020) (stating, "[t]hese terms reflect the parties' agreement with respect to the terms governing processing and security of Customer Data under the [Firebase Terms of Service26
27
28 (Footnote Continued on Next Page.)

1 Terms is to give app developers (and regulators, as further discussed below) the assurance that
 2 users can limit Google's data collection from Google's "Privacy Controls" as required by recent
 3 privacy laws.⁴⁴ Such Terms state that "[i]f Non-European Data Protection Legislation applies to
 4 either party's processing of Customer Personal Data, the parties acknowledge and agree that the
 5 relevant party will comply with any obligations applicable to it under that legislation with respect
 6 to the processing of that Customer Personal Data."⁴⁵

7 109. The California Consumer Privacy Act ("CCPA"), CIPA, the CDAFA, ~~the Wiretap~~
 8 Act, and the FTC Act (as implemented through the FTC Consent Decree) each qualifies as "Non-
 9 European Data Protection Legislation."⁴⁶ These laws forbid Google from using the ~~secret~~-Firebase
 10 SDK scripts to collect consumers' communications with apps without their consent. Therefore,
 11 Google's "Firebase Data Processing And Security Terms" indicated to developers (wrongly) that
 12 Google's "Web & App Activity" feature, when turned to "off," would prevent Google from
 13 collecting its users' communications with their apps.

14 110. Accordingly, app developers implementing Firebase SDK have not consented, do
 15 not consent, and cannot consent to Google's interception and collection of user data for Google's
 16 own purposes when users have turned off "Web & App Activity." In any event, consent to such
 17 brazen data-collection activities must be specific and express. There is no disclosure or service
 18 agreement between Google and third-party app developers that grants Google permission to
 19 intercept communications between users and apps when the user has turned off the "Web & App

20
 21 for Firebase Services"] Agreement."). *See also* Terms of Service for Firebase Services,
 22 FIREBASE, <https://firebase.google.com/terms> (last visited Nov. 11, 2020) (stating, "I agree that
 23 my use of Firebase service is subject to the applicable terms below," including the "Firebase
 24 Data Processing and Security Terms").

25 ⁴⁴ See also Google Ads Data Processing Terms, GOOGLE BUSINESSES AND DATA,
 26 <https://privacy.google.com/businesses/processorsterms/>, Section 9, providing similar promises of
 27 honoring data subject rights and providing controls via "Data Subject Tool(s)" to control data
 28 collection (last visited Nov. 11, 2020).

⁴⁵ Firebase Data Processing and Security Terms, FIREBASE,
<https://firebase.google.com/terms/data-processing-terms#9.-data-subject-rights;-data-export> (last
 visited Nov. 11, 2020), Section 5.1.3.

⁴⁶ The term is defined, in Google's terms, as "data protection or privacy legislation in force
 outside the European Economic Area, Switzerland, and the UK." Firebase Data Processing and
 Security Terms, FIREBASE, <https://firebase.google.com/terms/data-processing-terms#9.-data-subject-rights;-data-export> (last visited Nov. 11, 2020).

1 Activity” feature. And Google provided no notice to third-party app developers that it would
 2 intercept communications between users and apps when users shut off “Web & App Activity.”

3 111. Further, nowhere in any disclosures did Google ever indicate to its users that any
 4 separate agreement, between Google and an app developer, might override the user’s decision to
 5 turn off Web & App Activity.

6 **IV. Google Profits from the Communications It Intercepts Using Firebase SDK**

7 112. Google’s continuous tracking of users is no accident. Google is one of the largest
 8 technology companies in the world. Google LLC and its parent Alphabet Inc. have over 1.5 billion
 9 active account users, and Alphabet Inc. boasts a net worth exceeding \$1 trillion.

10 113. Google’s enormous financial success results from its unparalleled tracking and
 11 collection of personal and sensitive user information (including Plaintiffs’ and Class members’),
 12 which data Google then uses to target its advertisements.

13 114. Over the last five years, virtually all of Google’s revenue was attributable to third-
 14 party advertising. Google is continuously driven to find new and creative ways to leverage users’
 15 data in order to sustain Google’s phenomenal growth in its sales of advertising services.

16 115. Google profits from the data it collects—including the data collected from apps
 17 while users have switched off the “Web & App Activity” feature—in at least three ways. First,
 18 Google associates the confidential communications and data with a user profile or profiles.
 19 Second, Google later uses the user’s profile (including the intercepted confidential
 20 communications at issue here) to direct targeted advertisements to consumers (including Plaintiffs
 21 and Class members). Third, Google uses the results to modify Google’s own algorithms and
 22 technology, such as Google Search.

23 **A. Google Creates and Maintains “Profiles” on Its Users Using the Data
 24 Collected from Firebase SDK**

25 116. Google builds and maintains “profiles” relating to each individual (including
 26 Plaintiffs and Class members) and to each of their devices. These “profiles” contain all the data
 27 Google can collect associated with each individual and each device. In a *Wired* article regarding
 28 Google’s privacy practices, Professor Schmidt stated that Google’s “business model is to collect

1 as much data about you as possible and cross-correlate it so they can try to link your online persona
 2 with your offline persona. This tracking is just absolutely essential to their business. ‘Surveillance
 3 capitalism’ is a perfect phrase for it.”⁴⁷

4 117. Google uses those user profiles for numerous purposes. One important purpose is
 5 to guide Google’s targeted advertisements. The profiles allow Google to effectively target
 6 advertisements. As a result of using the user profiles, Google’s targeted advertisements are more
 7 effective and therefore Google can charge advertisers more for these services.

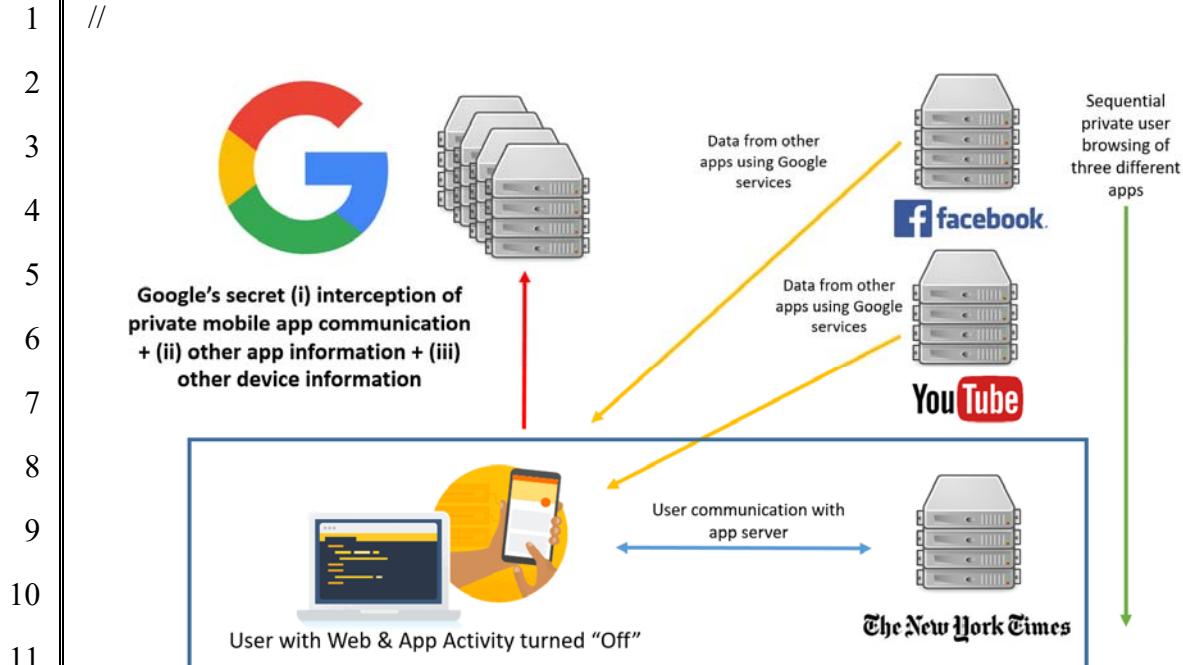

8 118. Google includes in its user profiles data secretly transmitted to Google from
 9 consumer devices by the Firebase SDK scripts during times that the user had switched the “Web
 10 & App Activity” feature off. By including this data in its user profiles, Google increases the user
 11 profiles’ value to Google and thereby allows Google to more effectively target advertisements to
 12 these users (among other uses of these profiles).

13 119. Google combines the data, transmitted to Google by the Firebase SDK scripts, with
 14 additional data generated by apps, running on the device, that use Google’s services. This
 15 additional data includes: (1) device identifiers from the device’s operating system; (2) geolocation
 16 information, including from cellular and wi-fi signals, and (3) Google’s own persistent identifiers,
 17 such as its Google Analytics User-ID and Chrome X-Client Referrer Header, which identify
 18 specific individual users and the users’ devices.

19 120. The following diagram illustrates the process by which Google collects information
 20 from a mobile device while users have Web & App Activity turned off:

21 //
 22 //
 23 //
 24 //
 25 //

27 47 Lily Hay Newman, *The Privacy Battle to Save Google from Itself*, WIRED (Nov. 1, 2018),
 28 <https://www.wired.com/story/google-privacy-data/> (last visited Nov. 11, 2020).

121. The communications and data transmitted to Google from consumer devices, by the ~~secret~~ Firebase SDK scripts, is not “anonymized” in any meaningful sense of that word. Instead, this data is combined by Google into a user profile with all the other detailed, user-specific data Google collects on individuals and their devices. Google then uses these detailed profiles to help generate billions of dollars in advertising revenues without users’ consent.

18 **B. Google Generates Targeted Advertising to Class Members Based on Data Transmitted to Google by the Firebase SDK Scripts**

19 122. Google’s targeted advertising services generate the vast majority of Google’s hundreds of billions of dollars in annual revenue.⁴⁸ The more accurately that Google can track and target consumers, the more advertisers are willing to pay.

20 123. Google’s “Ad Manager” service generates targeted advertisements to be displayed alongside third-party websites’ content. The “user profiles” described above are used by Ad Manager to select which ads to display to users.

26 ⁴⁸ Eric Rosenberg, *How Google Makes Money (GOOG)*, INVESTOPEDIA (June 23, 2020), available at <https://www.investopedia.com/articles/investing/020515/business-google.asp#:~:text=Google%20Ads%20and%20Search%20Advertising,results%20generated%20by%20Google's%20algorithm> (last visited Nov. 11, 2020).

1 124. Google also sells in-app advertising services. For example, some apps display an
 2 advertisement on part of the screen. Google is paid to select and transmit targeted advertisements
 3 in this way, as well. In doing so, Google uses the “user profiles” described above.

4 125. Google is able to demand high prices for its targeted-advertising services because
 5 Google’s user profiles (including data that Google obtained from the Firebase SDK transmissions)
 6 are so detailed.

7 126. If Google were to give consumers (including Plaintiffs and Class members) power
 8 to shut off the stream of data transmission from Firebase SDK, then that would harm Google’s
 9 ability to build detailed user profiles and to effectively target advertisements. That, in turn, would
 10 harm Google’s biggest (by far) source of revenue. This explains why Google repeatedly promises
 11 privacy and control (in order to make users feel better) and then repeatedly breaks those promises
 12 (in order to make billions of dollars).

13 **C. Google Refines and Develops Products Using the Data Transmitted to Google
 14 by the Firebase SDK Scripts**

15 127. Google also benefits by using the data it collects to refine existing Google products,
 16 services, and algorithms—and to develop new products, services, and algorithms. This collection,
 17 usage, and monetization of user data contravenes the steps Plaintiffs and Class members have
 18 taken to try to control their information and to prevent it from being used by Google.

19 **1. Google Search**

20 128. Currently, more than 90% of online searches carried out by U.S. consumers are
 21 done using Google’s web-based search engine, called Google Search.

22 129. Google Search, and the algorithms that power it, make use of the data Google has
 23 obtained from the Firebase SDK transmissions at issue here. Google Search would not be nearly
 24 as effective without the Firebase SDK data at issue here.

25 **2. On-Device Search Features**

26 130. Google also uses the Firebase SDK transmissions to develop and refine Google’s
 27 “On-Device Search” services. “On-Device Search” refers to a search of the content contained,
 28 linked, or referred to in the various apps of a mobile device. On most devices, this function appears

1 as a text rectangle, with a magnifying glass on the left side, and the word “Search” appearing where
 2 the user is meant to type in the query.

3 131. A well-built On-Device Search feature will not only allow users to find their tools
 4 and apps, but will also “deep link” the user to specific content and pages within the device’s apps.
 5 These “deep links” are similar to how web-based searches, like Google Search, can take a user
 6 directly to specific pages within a website. If a user then selects a search result that is “deep linked”
 7 to content on an app, the phone will respond to that selection by opening the relevant app and
 8 taking the user to the relevant content within the app. This is in contrast to the more traditional
 9 Google Search function, which would only search *web pages* rather than searching *within apps*.

10 132. In 2015, an industry publication named *Search Engine Watch* described Google’s
 11 On-Device Search as follows: “Google can index the content contained within an app, either
 12 through a sitemap file or through Google’s Webmaster Tools. If someone searches for content
 13 contained within an app, and if the user has that app installed, the person then has the option to
 14 view that content within the app, as opposed to outside the app on a mobile webpage. For sites
 15 that have the same content on their main website and app, the app results will appear as deep links
 16 within the search listing. If the user has the app installed and they tap on these deep links, the app
 17 will launch and take them directly to the content.”⁴⁹

18 133. In order to make its On-Device Search function more powerful, Google collects
 19 and records the content of apps on users’ phones. This is called “indexing.” By “indexing” the
 20 contents of apps, Google makes On-Device search quicker and more accurate. In August 2015,
 21 Google-sponsored publication *Search Engine Land* announced:

22 Historically, *app landing pages* on websites have been in the
 23 Google index—but *actual apps* and *internal app screens* have
 24 not.... Now that Google is indexing both app landing pages and
 25 deep screens in apps, Google’s app rankings fall into two basic
 26 categories, App Packs and App Deep Links. App Packs are much
 27 more like the app search results that SEOs [search engine
 28 optimizers] are used to, because they link to app download pages in
 Google Play or the App Store, depending on the device that you are

27 49 Christopher Ratcliff, *What Is App Indexing and Why Is It Important?*, SEARCH ENGINE WATCH
 28 (Nov. 19, 2015), available at <https://www.searchenginewatch.com/2015/11/19/what-is-app-indexing-and-why-is-it-important/> (last visited Nov. 11, 2020).

searching from.”⁵⁰

134. In March 2015, the industry publication *ReadWrite* reported on a rival search function, called AppWords, that was outperforming Google in the market for On-Device Search:

Deep links for mobile apps were designed to mimic Web links by letting users click into different parts of an app and not just its home screen. But they're also changing the way we discover new things. The deep-linking startup Deeplink has launched what appears to be the first intent based and keyword driven mobile search. Called AppWords (a play on Google AdWords), the new service basically prompts new links for app users to click on—ones that will take them from one app directly into another that's already on their phone. “Query-based search has become a secondary surfacing tool in mobile,” said cofounder Noah Klausman. “AppWords uses context to predict what people want to search. What we’ve built is what Google should have built a long time ago.”⁵¹

135. Google responded to this competition by acquiring Firebase in 2014, and then launching the Firebase SDK platform. Google intentionally designed the Firebase SDK scripts to secretly copy and transmit, to Google, users' communications with the apps and app developers while overriding device and account level controls. Google did this because Google knew that it needed this data to develop and refine Google's On-Device Search services. The secret Firebase SDK scripts give Google massive amounts of user data from apps—including apps that were developed for the devices of Google's rival, Apple.

136. When app developers use Firebase SDK, Google receives a number of benefits that enhance and reinforce its market power in the market for On-Device Search. As Google states in its own technical documentation for Firebase, Google’s On-Device Search “uses information about the actions users take on public and personal content in an app to improve ranking for Search results and suggestions.”

⁵⁰ Emily Grossman, *App Indexing & The New Frontier of SEO: Google Search + Deep Linking*, Search Engine Land (Aug. 12, 2015), available at <https://searchengineland.com/app-indexing-new-frontier-seo-google-search-deep-linking-226517> (last visited Nov. 11, 2020).

1 **V. The Communications Intercepted by Google Using Firebase SDK Are Highly
2 Valuable**

3 137. The information Google has collected using ~~the secret~~ Firebase SDK-~~scripts~~ is
4 highly valuable to Google, to other technology and advertising companies, and to users. This value
5 is well understood in the e-commerce industry.⁵² The world's most valuable resource is no longer
6 oil, but is instead consumers' data.⁵³

7 138. Even before the Class Period, there was a growing consensus that consumers'
8 personal data was very valuable. In 2004, Professor Paul M. Schwartz noted in the *Harvard Law
Review*:

9 Personal information is an important currency in the new
10 millennium. The monetary value of personal data is large and still
11 growing, and corporate America is moving quickly to profit from
12 the trend. Companies view this information as a corporate asset and
13 have invested heavily in software that facilitates the collection of
14 consumer information.⁵⁴

15 139. Likewise, in 2011, Christopher Soghoian (a former fellow at the Open Society
16 Institute and current principal technologist at the ACLU) wrote in *The Wall Street Journal*:

17

⁵⁴ Paul M. Schwartz, *Property, Privacy and Personal Data*, 117 HARV. L. REV. 2055, 2056–57 (2004).

The dirty secret of the Web is that the “free” content and services that consumers enjoy come with a hidden price: their own private data. Many of the major online advertising companies are not interested in the data that we knowingly and willingly share. Instead, these parasitic firms covertly track our web-browsing activities, search behavior and geolocation information. Once collected, this mountain of data is analyzed to build digital dossiers on millions of consumers, in some cases identifying us by name, gender, age as well as the medical conditions and political issues we have researched online.

Although we now regularly trade our most private information for access to social-networking sites and free content, the terms of this exchange were never clearly communicated to consumers.⁵⁵

A. The Firebase SDK Transmissions Are Valuable to Class Members

140. It is possible to quantify the cash value, to Class members, of the communications and data collected by Google using the Firebase SDK scripts while the “Web & App Activity” feature was turned off by Class members.

141. For example, in a study authored by Tim Morey, researchers studied the value that 180 internet users placed on keeping personal data secure.⁵⁶ Contact information was valued by the study participants at approximately \$4.20 per year. Demographic information was valued at approximately \$3.00 per year. However, web browsing histories were valued at a much higher rate: \$52.00 per year. The chart below summarizes the findings:

⁵⁵ Julia Angwin, *How Much Should People Worry About the Loss of Online Privacy?*, THE WALL STREET JOURNAL (Nov. 15, 2011), available at <https://www.wsj.com/articles/SB10001424052970204190704577024262567105738> (last visited Nov. 11, 2020).

⁵⁶ Tim Morey, *What's Your Personal Data Worth?*, DESIGN MIND (Jan. 18, 2011), available at <https://web.archive.org/web/20131206000037/http://designmind.frogdesign.com/blog/what039s-your-personal-data-worth.html> (last visited Nov. 11, 2020).

Although none of the categories on this chart corresponds directly to the data obtained by Google from Class members using the Firebase SDK scripts, Morey's research demonstrates that it is possible, in theory, to quantify the value of this data to users.

B. The Firebase SDK Transmissions Are Valuable to Google

142. In addition to quantifying the value of the intercepted data *to users*, it is also possible to quantify the value of this data *to Google*.

143. For example, it is possible to calculate the profits Google has earned from using this data to enhance its "user profiles"; to sell targeted advertisements; and to develop and refine other Google products. *See supra, ¶¶ 111-35112-36.*

144. It is also possible to assess the value of the intercepted data to Google by reference to the money that Google has, on other occasions, paid to users for this kind of data. Google began paying users for their web browsing data in 2012.⁵⁷

⁵⁷ Jack Marshall, *Google Pays Users for Browsing Data*, DIGIDAY (Feb. 10, 2012), available at <https://digiday.com/media/google-pays-users-for-browsing-data/> (last visited Nov. 11, 2020); see also K.N.C., *Questioning the Searchers*, THE ECONOMIST (June 13, 2012), available at <https://www.economist.com/schumpeter/2012/06/13/questioning-the-searchers> (last visited Nov. 11, 2020).

1 145. Google also pays internet users to participate in a panel that Google calls “Google
 2 Screenwise Trends.” The purpose of this panel is, according to Google, “to learn more about how
 3 everyday people use the Internet.”

4 146. Upon becoming panelists for Google Screenwise Trends, these users add a browser
 5 extension that shares with Google the sites they visit and how they use them. The panelists consent
 6 to Google tracking such information for three months in exchange for one of a number of “gifts,”
 7 including gift cards to retailers such as Barnes & Noble, Walmart, and Overstock.com. After three
 8 months, Google then pays panelists additional gift cards “for staying with” the panel.

9 147. These gift cards, mostly valued at \$5, demonstrated that Google assigned cash value
 10 to the data it obtained from internet users’ communications with the websites they visited. Google
 11 now pays Screenwise panelists up to \$3 *per week*.

12 148. There are other ways to assess the value of this data, including in terms of Google’s
 13 ability to maintain and extend its monopolies, as discussed below.

14 **C. The Firebase SDK Transmissions Would Be Valuable to Other Internet
 15 Firms**

16 149. The Firebase SDK transmissions at issue in this case would have value to other
 17 internet firms besides Google. It is possible to quantify this value.

18 150. During the Class Period, a number of platforms have appeared on which consumers
 19 monetize their data. For example:

20 a. Brave’s web browser pays users to watch online targeted ads, while
 21 blocking out everything else.⁵⁸

22 b. Loginhood “lets individuals earn rewards for their data and provides
 23 website owners with privacy tools for site visitors to control their data sharing,” via a “consent

24 ⁵⁸ Brandan Hesse, *Get Paid to Watch Ads in the Brave Web Browser*, LIFEHACKER (Apr. 26,
 25 2019), available at <https://lifehacker.com/get-paid-to-watch-ads-in-the-brave-web-browser-1834332279#:~:text=Brave%20a%20chromium-based%20web%20browser%20that%20boasts%20an,a%20more%20thoughtful%20way%20than%20we%20re%20accustomed%20to> (last visited Nov. 11, 2020) (“The model is
 26 entirely opt-in, meaning that ads will be disabled by default. The ads you view will be converted
 27 into Brave’s cryptocurrency, Basic Attention Tokens (BAT), paid out to your Brave wallet
 28 monthly”).

1 manager” that blocks ads and tracking on browsers as a plugin.⁵⁹

2 c. Ex-presidential candidate Andrew Yang’s “Data Dividend Project” aims to
 3 help consumers, “[t]ake control of your personal data. If companies are profiting from it, you
 4 should get paid for it.”⁶⁰

5 d. Killi is a new data exchange platform that allows users to own and earn
 6 from their data.⁶¹

7 e. BIGtoken “is a platform to own and earn from your data. You can use the
 8 BIGtoken application to manage your digital data and identity and earn rewards when your data is
 9 purchased.”⁶²

10 f. The Nielsen Company, famous for tracking the behavior of television
 11 viewers’ habits, has extended its reach to computers and mobile devices through Nielsen Computer
 12 and Mobile Panel. These applications track consumers’ activities on computers, phones, tablets,
 13 e-readers, and other mobile devices. In exchange, Nielsen gives users points worth up to \$50 per
 14 month, plus the chance of winning more money in regular sweepstakes.⁶³

15

 25 revenue from data sales made through their platforms. Our BIG promise: all data acquisition is
 26 secure and transparent, with consumers made fully aware of how their data is used and who has
 access to it.”).

⁶³ Kevin Mercandante, *Ten Apps for Selling Your Data for Cash*, BEST WALLET HACKS (June 10, 2020), available at <https://wallethacks.com/apps-for-selling-your-data/> (last visited Nov. 11, 2020).

g. Facebook has an app, called “Study,” that pays users for their data. Facebook has another app, called “Pronunciations,” that pays users for their voice recordings.⁶⁴

151. As established by the California Constitution and the CCPA, and recognized by the recently-enacted California Privacy Rights and Enforcement Act, consumers have a property interest in their personal data. Not only does the CCPA prohibit covered businesses from discriminating against consumers that opt-out of data collection, the CCPA also expressly provides that: “[a] business may offer financial incentives, including payments to consumers as compensation, for the collection of personal information, the sale of personal information, or the deletion of personal information.” Cal. Civ. Code § 1798.125(b)(1). The CCPA provides that, “[a] business shall not use financial incentive practices that are unjust, unreasonable, coercive, or usurious in nature.” Cal. Civ. Code § 1798.125(b)(4).

152. Through its false promises and unlawful data collection, Google is unjustly enriching itself.

153. If not for Google's actions, consumers could have received monetary value for their data from other internet firms.

D. There Is Value to Class Members in Keeping Their Data Private

154. In addition to monetary value of *selling* their data, Class members also assign value to keeping their data *private*. It is possible to quantify this privacy value, which is destroyed when the Firebase SDK scripts surreptitiously transmit users' data to Google while the users have turned off the "Web & App Activity" feature.

155. According to Google, more than 200 million people visit Google’s “Privacy Checkup” website each year. Each day, nearly 20 million people check their Google privacy settings. Users do these things because they care about keeping their data private and preventing its disclosure to anyone else, including to Google.

⁶⁴ Jay Peters, *Facebook Will Now Pay You for Your Voice Recordings*, THE VERGE (Feb. 20, 2020), available at <https://www.theverge.com/2020/2/20/21145584/facebook-pay-record-voice-speech-recognition-viewpoints-proununciations-app> (last visited Nov. 11, 2020).

1 156. Users also switched off the “Web & App Activity” feature for the same reason—
 2 they cared about their privacy and wished to prevent anyone, including Google, from accessing
 3 their data.

4 157. Surveys of consumers indicate the importance that consumers assign to privacy.
 5 For example, in a recent study by the Pew Research Center, 93% of Americans said it was
 6 “important” for them to be “in control of who can get information” about them. Seventy-four
 7 percent said it was “very important.” Eighty-seven percent of Americans said it was “important”
 8 for them not to have someone watch or listen to them without their permission. Sixty-seven
 9 percent said it was “very important.” And 90% of Americans said it was “important” that they be
 10 able to “control[] what information is collected about [them].” Sixty-five percent said it was “very
 11 important” to control this.

12 158. Likewise, in a 2011 Harris Poll study, 76% of Americans agreed that “online
 13 companies, such as Google or Facebook, control too much of our personal information and know
 14 too much about our browsing habits.”

15 **VI. Google Acted Without Consent To Intercept and Collect User App Data to Maintain
 16 and Extend Its Monopolies**

17 159. Google’s audacious invasion of millions of users’ privacy without consent was
 18 motivated in part by Google’s ongoing efforts to unlawfully maintain and extend its monopoly
 19 power in search and other markets. These efforts included Google’s 2014 acquisition of Firebase
 20 and Google’s ongoing and unlawful interception, collection, and use of data when users have taken
 21 the affirmative step of turning off “Web & App Activity” to prevent such interception, collection
 22 and use.

23 A. **Google’s Web Dominance**

24 160. Since its founding in 1998, Google has developed technology allowing Google to
 25 constantly track consumers across the internet, fueling and then ensuring Google’s search
 26 dominance. Over 90% of the U.S. population uses Google to conduct web searches, giving Google
 27 an enormous and unprecedented set of consumer data.

1 161. Google's dominance is tied to and based in part on Google's massive advertising
 2 business. Over 70% of online websites and publishers on the internet utilize Google's website
 3 visitor-tracking product, "Google Analytics," which allows Google to track consumers.

4 162. To implement Google Analytics, Google requires websites to embed Google's
 5 custom code into their existing webpage code. Google's embedded code causes the user's browser
 6 to send his or her personal information to Google and its servers in California, such as the user's
 7 IP address, the URL address (which identifies the particular page of the website that is being
 8 visited), and other information regarding the user's device and browser.

9 163. By embedding its tracking code through Google Analytics, Google has been able
 10 to intercept, track, collect, take, compile, and use a staggering amount of consumer data, far more
 11 than any company in the world. Because more than 70% of websites use Google Analytics, Google
 12 is able to track and collect personal consumer data online in real time and on non-Google
 13 properties—more pervasively than any other company online.

14 164. Google has been able to maintain and extend its dominance in products like Google
 15 Search because no other company is able to track consumers and aggregate their communications
 16 with websites and throughout the internet like Google.

17 **B. Google's Mobile Problem**

18 165. Prior to 2007, with Apple's introduction of the iPhone, internet searching was
 19 primarily done on a computer, through a browser. With the 2007 launch of the iPhone, online
 20 activities began to move from computers to smartphones and the apps that run on them. This
 21 created an existential threat to Google's dominance.

22 166. Before Google acquired Firebase in October 2014, Google recognized that mobile
 23 applications on mobile devices allowed users to access information without using Google search.
 24 Google thus knew that it needed data from users' app browsing activities to protect its search
 25 dominance and advertising revenues.

26 167. In February 2014, Google stated in its 10-K filings that one competitive threat to
 27 Google was "[m]obile applications on iPhone and Android devices, which allows users to access
 28 information directly from a publisher *without using our search engines.*"

1 168. Google identified one of the key risk factors for the company as more people “using
 2 devices other than desktop computers to access the internet” and acknowledged that “search
 3 queries are increasingly being undertaken via ‘apps’ tailored to particular devices or social media
 4 platforms, *which could affect our share of the search market over time.*”

5 169. Google stated in its next series of 10-K filings that this risk was a threat to Google’s
 6 lucrative advertising business, noting that “search queries are increasingly being undertaken via
 7 ‘apps’ tailored to particular devices or social media platforms, *which could affect our search and*
 8 *advertising business over time.*”

9 **C. Google’s Mobile Focus with Android & Firebase**

10 170. Google feared that consumers’ switch from using computers to search, to instead
 11 using mobile devices to search, would endanger Google’s dominance of the market for search
 12 functions. In response to that danger, Google adopted a new strategy: transport and embed
 13 Google’s search ecosystem into every part of mobile devices over which Google had, or could
 14 gain, influence. Google’s purpose in doing this was to keep fueling Google’s dominance and
 15 advertising revenues.

16 171. One way Google sought to maintain and extend its dominance was with its
 17 acquisition of the Android operating system (OS); its subsequent development of Android; and its
 18 push to cause mobile device manufacturers to adopt Android on their devices. Google acquired
 19 Android in 2005 and released the first commercial version of the Android operating system,
 20 Android 1.0, in September 2008.

21 172. As recently recounted in the comprehensive report issued by the U.S. House of
 22 Representative’s Subcommittee on Antitrust, Commercial and Administrative Law, entitled
 23 *Investigation of Competition In Digital Markets*, “[f]or mobile devices, Google imposed a set of
 24 restrictive contractual terms effectively requiring manufacturers of devices that used its Android
 25 operating system to pre-install both Chrome and Google Search.”⁶⁵

26
 27 ⁶⁵ STAFF OF S. COMM. ON ANTITRUST, COMMERCIAL, AND ADMINISTRATIVE LAW, INVESTIGATION
 28 OF COMPETITION IN DIGITAL MARKETS, at 178,
https://judiciary.house.gov/uploadedfiles/competition_in_digital_markets.pdf?utm_campaign=4493-519.

1 173. Just as Microsoft used its monopoly power on manufacturers to require the
 2 installation of Windows Explorer instead of Netscape, Google used its monopoly power to require
 3 phone manufacturers and app developers to incorporate Google's various products that reinforce
 4 Google Search. The more dominance Google could obtain in search, the more information it could
 5 collect and aggregate. The more information it could collect and aggregate, the more dominance
 6 Google could have in advertising, its key profit center.

7 174. One other way that Google sought to maintain and extend its dominance was with
 8 its October 2014 acquisition of Firebase; its subsequent development of the Firebase SDK
 9 platform; and its push to cause third-party app developers to adopt Firebase SDK. Before Google
 10 acquired it, Firebase was a separate company with an application programming interface (API)
 11 enabling synchronization of application data across Apple's iOS, Android, and web devices. By
 12 acquiring Firebase, Google gained the tools it needed to acquire users' mobile app data and, in part
 13 and along with Android, to address the competitive threat posed by Apple.

14 175. Firebase was so important to Google that the company featured it during Google's
 15 annual conference in May 2016, with Google CEO Sundar Pichai stating: "Firebase is the most
 16 comprehensive developer offering we have done to date." Google presented more than thirty
 17 sessions on Firebase during that 2016 conference.

18 176. During that conference, on May 20, 2016, Jason Titus, Vice President of Google's
 19 Developer Products Group, announced the "next generation of Firebase" with a mobile analytics
 20 tool called "Firebase Analytics" that was "inspired by much of the work that we've done in the
 21 last 10 years with Google Analytics, but it's designed specifically for the unique needs of apps."⁶⁶

22 177. Google's Android and Firebase efforts are also tied to Google's efforts with "on
 23 device search." Because mobile apps are not constantly active on the device and need to be
 24 launched separately, it is much more difficult for Google to crawl and index content maintained
 25 on mobile content. Because of personal content and information, apps also tend to be secured,

27 26 ⁶⁶ Pangambam S., *Google I/O 2016 Keynote (Full Transcript)*, THE SINGJU POST (May 20, 2016),
 28 available at <https://singjupost.com/google-io-2016-keynote-full-transcript/?singlepage=1> (last visited Nov. 11, 2020).

1 self-contained, and separated from other apps. Unlike with data collection on the web, Google
 2 cannot simply send its army of “web crawlers” to scan, scrape, and store content with mobile apps.

3 178. Google’s Firebase acquisition provided Google with what it previously lacked: the
 4 ability to collect personal user data *en masse* from mobile devices and apps—including devices
 5 and apps developed by its rival Apple. When app developers use Firebase SDK, Google receives
 6 a number of benefits that enhance and reinforce Google’s market power. Firebase SDK enables
 7 Google to crawl and index apps just as it does for traditional websites. Developers often have no
 8 choice but to use Firebase SDK because of Google’s demands and market power, including with
 9 search, analytics, advertisements, and the Android mobile operating system.

10 **D. Google’s Increasing Trove of Consumers’ Mobile Data and Power**

11 179. Since acquiring Firebase in 2014, Google has quietly collected what must be the
 12 largest index of mobile app pages in the world, including most apps on Android OS. Google has
 13 also continued to use its monopoly power with respect to web-based searching to push rapid
 14 adoption of Firebase SDK, so that it can eventually release a more complete search product that
 15 includes every mobile app page in the world. As a result, nearly every Android OS user (and most
 16 iOS users) are likely to have fallen victim to Google’s unlawful acts.

17 180. Perhaps most concerning is that Google uses the data collected with Firebase
 18 SDK—including while users have Web & App Activity turned off—to target users with
 19 advertisements throughout Google’s entire advertising ecosystem—including in the very app
 20 where the communication was intercepted, and other apps of other app developers. All consumers’
 21 requests for content from the app thereby become accessible, collectible, and usable by Google,
 22 even where users have not consented to Google’s collection and use of such information.

23 181. By compiling not just consumer profiles, but surveying human behavior across the
 24 vast majority of mobile app activity, Google tracks consumer activity more pervasively than any
 25 other company and is thus able to create a more targeted search product as compared to its
 26 competitors, by its ability to claim that Google knows how best to rank websites and online
 27 properties. Google Search would not be nearly as potent a tool without Google Analytics as a
 28 complement and Google’s ongoing data collection with its Firebase SDK.

1 182. Google's own internal documents reveal that Google knows what it is doing is
 2 wrong. But Google has made a bet: It has wagered that by the time regulators, lawmakers, or the
 3 public at large uncover that Google has compiled an almost unlimited amount of user data from
 4 apps (without proper consent), Google will have already won the game against any prospective
 5 competitor. Left unchecked, Google will achieve near complete monopoly power in search, data
 6 collection, and private user information the likes of which the world has never seen.

7 **VII. Tolling of the Statutes of Limitations**

8 183. Each unauthorized transmission of data to Google by the Firebase SDK scripts is a
 9 separate "wrong" which triggers anew the relevant statutes of limitations.

10 184. Moreover, any applicable statutes of limitations have been tolled under (1) the
 11 fraudulent concealment doctrine, based on Google's knowing and active concealment and denial
 12 of the facts alleged herein, and (2) the delayed discovery doctrine, as Plaintiffs did not and could
 13 not reasonably have discovered Google's conduct alleged herein until shortly before the original
 14 complaint was filed.

15 185. Throughout the Class Period, Google repeatedly and falsely represented that its
 16 users (including Plaintiffs and Class members) could prevent Google from intercepting their
 17 communications by turning off "Web & App Activity." Google never disclosed that it would
 18 continue to track users and collect their data once this feature was turned off.

19 186. Google also further misled users by indicating that data associated with them would
 20 be viewable through their account, but Google did not make the user data at issue in this lawsuit
 21 (collected while Web & App Activity is turned off) viewable in user accounts. Google's failure
 22 to do so during the Class period is part of Google's active deception and concealment.

23 187. Google has also made the statements quoted above, which (1) misrepresent material
 24 facts about Google's interception and use of users' data on apps and/or (2) omit to state material
 25 facts necessary to make the statements not misleading. *See supra*, ¶¶ 85–10386–104. Google
 26 thereby took affirmative steps to mislead Plaintiffs and others about the effect of switching the
 27 "Web & App Activity" feature off.

1 188. Plaintiffs relied upon Google's false and misleading representations and omissions
 2 and believed that Google was not intercepting their private communications while the "Web &
 3 App Activity" feature was turned off.

4 189. Plaintiffs did not discover and could not reasonably have discovered that Google
 5 was instead intercepting and using their data in the ways set forth in this Complaint until shortly
 6 before the lawsuit was filed in consultation with counsel.

7 190. Plaintiffs exercised reasonable diligence to protect their data from interception.
 8 That is precisely why they turned off the "Web & App Activity" feature: to protect their data from
 9 interception by Google. Plaintiffs did not and could not reasonably have discovered their claims
 10 until consulting with counsel shortly before the filing of the original complaint through the exercise
 11 of reasonable diligence.

12 191. Accordingly, Plaintiffs and Class members could not have reasonably discovered
 13 the truth about Google's practices until shortly before this litigation was commenced.

14 **VIII. Google Collected the Data for the Purpose of Committing Further Tortious and
 15 Unlawful Acts**

16 192. Google collected the data at issue here (from users who turned off "Web & App
 17 Activity") for the purpose of committing additional tortious and unlawful acts. Google's
 18 subsequent use of the data violated the California Consumer Privacy Act ("CCPA"); the CDAFA;
 19 and the FTC's 2011 Consent Order. Google also used the data to tortiously invade consumers'
 20 privacy and intrude on their seclusion.

21 193. *Google collected the data with the intent to violate the California Consumer
 22 Privacy Act.* The data collected from users at issue in this lawsuit, while Web & App Activity is
 23 turned off, qualifies as "personal information" that is protected by the CCPA. Cal. Civ. Code
 24 § 1798.140(o). The CCPA provides:

1 Cal. Civ. Code § 1798.100(b) (emphasis added).

2 194. At the time Google collected data from users when they turned off “Web & App
 3 Activity,” Google intended to “use” that data “for additional purposes without providing the
 4 consumer with notice consistent with this section.” Whenever Google uses the confidential
 5 communications wrongfully collected or aggregates it with other information to gain additional
 6 insight and intelligence, Google has violated the express prohibitions of the CCPA.

7 195. Moreover, Google carried out its intent: As described elsewhere in this Complaint,
 8 Google made use of the data it collected from users who turned off “Web & App Activity” for
 9 “additional purposes.” The users had never been “informed” of those “additional purposes.”
 10 Google never gave its users “notice consistent with” the CCPA’s requirements regarding these
 11 “additional purposes” for which Google used the data collected from users who have turned off
 12 Web & App Activity.

13 196. ***Google collected the data with the intent to violate the FTC’s 2011 Consent
 14 Order.*** The FTC ordered Google to obtain “express affirmative consent” from each user, “prior to
 15 any new or additional sharing” of a user’s information that is “a change from stated sharing practices
 16 in effect at the time [Google] collected such information.”⁶⁷

17 197. Google began the data collection and sharing at issue in this lawsuit after the 2011
 18 Consent Order. At the time Google collected data from users who turned off “Web & App
 19 Activity,” Google intended to share that data with third parties, in a manner that was very different
 20 from the “stated sharing practices” Google had disclosed to users. Google intended to do this
 21 without obtaining consent.

22 198. Moreover, Google carried out its intent: Google shared and/or sold the data,
 23 collected from users who turned off “Web & App Activity,” with third-parties including Google’s
 24 advertising customers. That sharing and/or selling of data contradicted Google’s repeated
 25 assurances to users, described herein. Google shared this data without obtaining consent.

26
 27 ⁶⁷[Decision and Order at 3, *In re Google, Inc.*, No. C 4336, \(F.T.C. Oct. 13, 2011\),
 28 <https://www.ftc.gov/enforcement/cases-proceedings/102-3136/google-inc-matter>.](https://www.ftc.gov/enforcement/cases-proceedings/102-3136/google-inc-matter)

1 199. ***Google collected the data with the intent to violate the CDAFA.*** The CDAFA
 2 provides that it is a public offense to “without permission . . . make[] use of any data from a
 3 computer” Cal. Penal Code § 502.

4 200. At the time that Google caused the Firebase SDK scripts to transmit users’ data to
 5 Google’s servers, Google intended to later “make use of” that data to enhance Google’s profiles
 6 on the users; to sell advertising services; to select and send targeted advertising; and for other
 7 purposes. Google then did “make use of” the data in these ways. These subsequent acts by Google
 8 were separate and independent violations of the CDAFA.

9 201. ***Google collected the data with the intent to intrude upon users’ seclusion and***
 10 ***invade their constitutional privacy.*** The California Constitution and common law protect
 11 consumers from invasions of their privacy and intrusion upon seclusion – in addition to newer
 12 privacy laws such as the CCPA.

13 202. Users of apps turned off “Web & App Activity” for the purpose of preventing
 14 others, including Google, from finding out what the users were viewing and reading on mobile
 15 apps. For example, users’ app activities, while “Web & App Activity” have been turned off, may
 16 reveal: a user’s dating activity; a user’s sexual interests and/or orientation; a user’s political or
 17 religious views; a user’s travel plans; a user’s private plans for the future (e.g., purchasing of an
 18 engagement ring). These are just a few of the many intentions, desires, plans, and activities that
 19 users intend to keep private when they turn off “Web & App Activity.”

20 203. Users had a reasonable expectation that Google would do as it promised, and that
 21 Google would stop collecting data from the Firebase SDK scripts once users switched off the “Web
 22 & App Activity” switch.

23 204. By causing targeted advertisements to be sent to users and to users’ devices, based
 24 on data Google collected while users turned off “Web & App Activity,” Google has caused that
 25 data to be revealed to others and has thereby invaded the privacy and intruded upon the seclusion
 26 of the users whose data was collected while they expected to have privacy.

27 205. Google had the intent to send these targeted advertisements at the time that Google
 28 was collecting data from users who turned off “Web & App Activity.”

FACTUAL ALLEGATIONS REGARDING THE NAMED PLAINTIFFS

206. Google does not disclose all of the apps that use Firebase SDK, and for which Google therefore collected or continues to collect users' data while they have Web & App Activity turned off, or the time period during which Google collected or continues to collect such data for any given app. Plaintiffs are therefore at this time unable to identify all apps that are relevant for purposes of this litigation. Google's Firebase website identifies the following apps as supported by Firebase SDK: The New York Times, NPR One, Halfbrick, Duolingo, Alibaba, Lyft, Venmo, The Economist, Trivago, Ctrip, Wattpad, and Gameloft.⁶⁸ Other sources indicate that over 1.5 million apps use Google's Firebase SDK. Discovery will reveal which of Plaintiffs' apps were or are supported by Firebase SDK, and for which Google intercepted and collection data without disclosure of consent while Web & App Activity was turned off.

207. Plaintiff JulieAnna Muniz is an adult domiciled in California and has an active Google account and had an active account during the Class Period.

208. At various times during the Class Period, Ms. Muniz accessed numerous app pages on the Internet containing content she was interested in on her Apple device while “Web & App Activity” was turned off. Those app pages were accessed through apps including, among others, Amazon Shopping, Apple Music, Facebook, Google Maps, Instagram, Lyft, NPR One, Pandora, Apple Podcasts, Scrabble, Shazam, Solitaire, Uber, Venmo, The Weather Channel, and YouTube. She sent and received communications through these apps on mobile devices which were computing devices that were not shared devices. Her communications with the apps that used Firebase SDK were intercepted and tracked by Google without her knowledge or consent.

209. Plaintiff Anibal Rodriguez is an adult domiciled in Florida and has active Google accounts and had active accounts during the Class Period.

210. At various times during the Class Period, Mr. Rodriguez accessed numerous app pages on the Internet containing content he was interested in on his Android device while “Web

⁶⁸ See *Firebase Helps Mobile and Web App Teams Succeed*, FIREBASE, <https://firebase.google.com/>.

1 & App Activity" was turned off. Those app pages were accessed through apps including, among

 19 which were computing devices that were not shared devices. His communications with the apps
 20 that used Firebase SDK were intercepted and tracked by Google without his knowledge or consent.

211. Plaintiff Eliza Cambay is an adult domiciled in California and has active Google
 22 accounts and had active Google accounts during the Class Period.

232. At various times during the Class Period, Ms. Cambay accessed numerous app
 24 pages on the Internet containing content she was interested in on her Android device while "Web
 25 & App Activity" was turned off. Those app pages were accessed through apps including, among
 26 others, A to Z ECG Interpretation, ABC, All Trails, Amazon Shopping, Amazon Music, Angie's

 19 Hut, QR Reader, Roblox, Scam Shield, Scanner App: PDF Document Scan, Shazam, Snapchat,
 20 Strava, SunPass, Sweatcoin, The New York Times, T-Mobile, T-Mobile Tuesdays, Turbo, Uber,
 21 USAA, Venmo, VideoConnect, Walgreens, Watch (Apple), Microsoft Word, Yahoo Mail,
 22 YouTube, and Zoom. He sent and received communications through these apps on mobile devices
 23 which were computing devices that were not shared devices. His communications with the apps
 24 that used Firebase SDK were intercepted and tracked by Google without his knowledge or consent.

25 217. Plaintiff Julian Santiago is an adult domiciled in Florida and has an active Google
 26 account and had an active Google account during the Class Period.

27 218. At various times during the Class Period, Mr. Santiago accessed numerous app
 28 pages on the Internet containing content he was interested in on his Apple device while “Web &

1 App Activity" was turned off. Those app pages were accessed through apps including, among
 2 others, Acorns, Amazon Shopping, Amazon Prime Video, Bleacher Report, Calm, Duolingo,
 3 E*Trade, ESPN Fantasy, Fundrise, Google Docs, Google Maps, Google Sheets, LinkedIn,
 4 MapMyRide, Marcus, Nextdoor, NFL, Nike Run Club, NPR One, Oak, Spotify, Starbucks, Stocks,
 5 Target, The Economist, Titan, Twitter, Venmo, Weather - The Weather Channel, Xfinity Stream,
 6 and YouTube. He sent and received communications through these apps on mobile devices which
 7 were computing devices that were not shared devices. His communications with the apps that used
 8 Firebase SDK were intercepted and tracked by Google without his knowledge or consent.

9 219. Plaintiff Harold Nyanjom is an adult domiciled in Kansas and has active Google
 10 accounts and had active Google accounts during the Class Period.

11 220. At various times during the Class Period, Mr. Nyanjom accessed numerous app
 12 pages on the Internet containing content he was interested in on his Android device while "Web
 13 & App Activity" was turned off. Those app pages were accessed through apps including, among
 14 others, Alibaba, Amazon Shopping, Android Accessibility Suite, Android Auto, Android System
 15 WebView, Audio Recorder, Auntie Anne's, B. Good, Booking.com, Boxer, Cash App, CBS,
 16 Chrome, Cricket Partner Tab, Digital Wellbeing, Dillon's, Docs, Dollar General, Duo, Duolingo,
 17 Emergency Alerts, Facebook, Facebook App Installer, Facebook App Manager, Facebook
 18 Services, Files, Files by Google, Firehouse Subs, Gallery, Game Launcher, Gmail, Google, Google
 19 Drive, Google Play Movies & TV, Google Play Services, Google Play Services for AR, Google
 20 Play Store, Google Text-to-Speech Engine, Home, Instacart, Instagram, Lens, Lyft, Maps,
 21 Messaging, Messenger, Mobile Service, Music, myCricket, News Break, NPR One, Outlook,
 22 Photos, QR Scanner, QuickMemo+, Repost, Sheets, SIM Toolkit, Slides, SmartWorld, Sricam,
 23 The Economist, The New York Times, TheSCOOP, TikTok, Trip.com, Trivago, Twitter, Uber,
 24 Visual Voicemail, Wattpad, WhatsApp, WordPress, Your Phone Companion, YouTube, and
 25 YouTube Music. He sent and received communications through these apps on mobile devices
 26 which were computing devices that were not shared devices. His communications with the apps
 27 that used Firebase SDK were intercepted and tracked by Google without his knowledge or consent.
 28

1 221. Plaintiff Kellie Nyanjom is an adult domiciled in Kansas and has active Google
 2 accounts and had active Google accounts during the Class Period.

3 222. At various times during the Class Period, Ms. Nyanjom accessed numerous app
 4 pages on the Internet containing content she was interested in on her Android devices while “Web
 5 & App Activity” was turned off. Those app pages were accessed through apps including, among
 6 others, Alibaba, Amazon Shopping, Android Accessibility Suite, Android Auto, Android System
 7 WebView, Assistant, Audio Recorder, Auntie Anne’s, B. Good, Booking.com, Boxer, Calculator,
 8 Calendar, Camera, Candy Crush Saga, Cash App, CBS, Chrome, Cricket Partner Tab, Digital
 9 Wellbeing, Dillon’s, Docs, Dollar General, Duolingo, Emergency Alerts, Facebook, Facebook
 10 App Installer, Facebook App Manager, Facebook Lite, Facebook Services, Files, Files by Google,
 11 Firehouse Subs, Gallery, Game Launcher, Games, Gmail, Google, Google Drive, Google Go,
 12 Google Play Movies & TV, Google Play Services, Google Play Services for AR, Google Play
 13 Store, Google Text-to-Speech Engine, Home, Instacart, Instagram, Lens, LGE PAI Configuration,
 14 Lyft, Maps, Maps Go, Messaging, Messenger, Mobile Service, myCricket, News Break, NPR One,
 15 Outlook, Pandora, Pinterest, Play Music, Play Store (Google), QR Scanner, QuickMemo+, Repost,
 16 Sheets, SIM Toolkit, Slides, SmartNews, SmartWorld, Sricam, The Economist, The New York
 17 Times, TheSCOOP, TikTok, Trip.com, Trivago, Twitter, Uber, Visual Voicemail, Wattpad,
 18 WhatsApp, WordPress, Your Phone Companion, YouTube, and YouTube Music. She sent and
 19 received communications through these apps on mobile devices which were computing devices
 20 that were not shared devices. Her communications with the apps that used Firebase SDK were
 21 intercepted and tracked by Google without her knowledge or consent.

22 223. Plaintiff Susan Lynn Harvey is an adult domiciled in California and has active
 23 Google accounts and had active Google accounts during the Class Period.

24 224. At various times during the Class Period, Ms. Harvey accessed numerous app pages
 25 on the Internet containing content she was interested in on her Android devices while “Web &
 26 App Activity” was turned off. Those app pages were accessed through apps including, among
 27 others, Avast Cleanup, Avast Antivirus – Scan & Remove Virus, Cleaner, Bixby Vision, California
 28 Lottery, Candy Crush, EECU, Facebook Messenger, File Viewer for Android, Galaxy Themes,

1 Gangstar 4, Gold Fish, Google One, Jackpot Party, Jetpack, MixerBox, PicCollage, Samsung
 2 Gallery, Samsung Print Service Plugin, The New York Times, Voice Recorder, and Wattpad. She
 3 sent and received communications through these apps on mobile devices which were computing
 4 devices that were not shared devices. Her communications with the apps that used Firebase SDK
 5 were intercepted and tracked by Google without her knowledge or consent.

6 225. None of the Plaintiffs consented to the interception of their confidential
 7 communications made while “Web & App Activity” was turned off.

8 CLASS ACTION ALLEGATIONS

9 226. This is a class action pursuant to Rules 23(a) and (b)(3) of the Federal Rules of
 10 Civil Procedure on behalf of the following Classes:

- 11 • Class 1 – All individuals who during the Class Period (a) turned off
 12 “Web & App Activity,” and (b) whose mobile app activity was still
 13 transmitted to Google, from a non-Google branded mobile app,
because of Firebase SDK scripts, (c) on (c) a mobile device running
 14 the Android operating system (OS), because of Firebase SDK scripts,
on a non-Google branded mobile app.
- 15 • Class 2 – All individuals who during the Class Period (a) turned off
 16 “Web & App Activity,” and (b) whose mobile app activity was still
 17 transmitted to Google, from a non-Google branded mobile app,
because of Firebase SDK scripts, (c) on (c) a mobile device running a
 18 non-Android operating system (OS), because of Firebase SDK
scripts, on a non-Google branded mobile app.

19 The Class Period begins on the date Google first received data, as a result of a Firebase SDK script,
 20 from the device of a user who had turned off (or paused) the “Web & App Activity” feature. The
 21 Class Period continues through the present.

22 227. Excluded from the Classes are: (1) the Court (including any Judge or Magistrate
 23 presiding over this action and any members of their families); (2) Defendant, its subsidiaries,
 24 parents, predecessors, successors and assigns, including any entity in which any of them have a
 25 controlling interest and its officers, directors, employees, affiliates, legal representatives;
 26 (3) persons who properly execute and file a timely request for exclusion from the Class; (4) persons
 27 whose claims in this matter have been finally adjudicated on the merits or otherwise released;
 28

1 (5) Plaintiffs' counsel, Class counsel and Defendant's counsel; and (6) the legal representatives,
 2 successors, and assigns of any such excluded persons.

3 228. **Ascertainability:** Membership of the Classes is defined based on objective criteria
 4 and individual members will be identifiable from Google's records, including from Google's
 5 massive data storage, consumer accounts, and enterprise services. Based on information readily
 6 accessible to it, Google can identify members of the Classes who own an Android device or have
 7 a non-Android device with an associated Google account, who were victims of Google's
 8 impermissible interception, receipt, or tracking of communications as alleged herein.

9 229. **Numerosity:** Each of the Classes likely consists of millions of individuals.
 10 Accordingly, members of the Classes are so numerous that joinder of all members is impracticable.
 11 Class members may be identified from Defendant's records, including from Google's consumer
 12 accounts and enterprise services.

13 230. **Predominant Common Questions:** Common questions of law and fact exist as to
 14 all members of the Classes and predominate over any questions affecting solely individual
 15 members of the Classes. Common questions for the Classes include, but are not limited to, the
 16 following:

- 17 a. Whether Google represented that Class members could control what
 18 communications of user information, app history and activity data were
 19 intercepted, received, or collected by Google;
- 20 b. Whether Google gave the Class members a reasonable expectation of privacy
 21 that their communications of user information, app history and activity data
 22 were not being intercepted, received, or collected by Google when the Class
 23 member had "Web & App Activity" turned off;
- 24 c. Whether Google in fact intercepted, received, or collected communications of
 25 user information, app history and activity data from Class members when the
 26 Class members had "Web & App Activity" turned off;
- 27 d. Whether Google's practice of intercepting, receiving, or collecting
 28 communications of user information, app history and activity data violated

1 state and federal privacy laws;

2 e. Whether Google's practice of intercepting, receiving, or collecting

3 communications of user information, app history and activity data violated

4 state and federal anti-wiretapping laws;

5 f. Whether Google's practice of intercepting, receiving, or collecting

6 communications of user information, app history and activity data violated

7 any other state and federal tort laws;

8 g. Whether Plaintiffs and Class members are entitled to declaratory and/or

9 injunctive relief to enjoin the unlawful conduct alleged herein; and

10 h. Whether Plaintiffs and Class members have sustained damages as a result of

11 Google's conduct and if so, what is the appropriate measure of damages or

12 restitution.

13 231. **Typicality:** Plaintiffs' claims are typical of the claims of other Class members, as

14 all members of the Classes were uniformly affected by Google's wrongful conduct in violation of

15 federal and state law as complained of herein.

16 232. **Adequacy of Representation:** Plaintiffs will fairly and adequately protect the

17 interests of the members of the Classes and have retained counsel that is competent and experienced

18 in class action litigation, including nationwide class actions and privacy violations. Plaintiffs and

19 their counsel have no interest that is in conflict with, or otherwise antagonistic to the interests of

20 the other Class members. Plaintiffs and their counsel are committed to vigorously prosecuting this

21 action on behalf of the members of the Classes, and they have the resources to do so.

22 233. **Superiority:** A class action is superior to all other available methods for the fair and

23 efficient adjudication of this controversy since joinder of all members is impracticable. This proposed

24 class action presents fewer management difficulties than individual litigation and provides the

25 benefits of a single adjudication, economies of scale and comprehensive supervision by a single, able

26 court. Furthermore, as the damages individual Class members have suffered may be relatively small,

27 the expense and burden of individual litigation make it impossible for Class members to individually

1 redress the wrongs done to them. There will be no difficulty in management of this action as a class
 2 action.

3 **234. California Law Applies to the Entirety of Both Classes:** California's substantive
 4 laws apply to every member of the Classes, regardless of where in the United States the Class member
 5 resides, or to which Class the Class member belongs. Defendant's own Terms of Service explicitly
 6 state, "California law will govern all disputes arising out of or relating to these terms, service specific
 7 additional terms, or any related services, regardless of conflict of laws rules. These disputes will be
 8 resolved exclusively in the federal or state courts of Santa Clara County, California, USA, and you
 9 and Google consent to personal jurisdiction in those courts." By choosing California law for the
 10 resolution of disputes covered by its Terms of Service, Google concedes that it is appropriate for this
 11 Court to apply California law to the instant dispute to all Class members. Further, California's
 12 substantive laws may be constitutionally applied to the claims of Plaintiffs and the Class members
 13 under the Due Process Clause, *see* U.S. CONST. amend. XIV, § 1, and the Full Faith and Credit Clause,
 14 *see* U.S. CONST. art. IV, § 1, of the U.S. Constitution. California has significant contact, or significant
 15 aggregation of contacts, to the claims asserted by Plaintiffs and all Class members, thereby creating
 16 state interests that ensure that the choice of California state law is not arbitrary or unfair. Defendant's
 17 decision to reside in California and avail itself of California's laws, and to engage in the challenged
 18 conduct from and emanating out of California, renders the application of California law to the claims
 19 herein constitutionally permissible. The application of California laws to the Classes is also
 20 appropriate under California's choice of law rules because California has significant contacts to the
 21 claims of Plaintiffs and the proposed Classes and California has the greatest interest in applying its
 22 laws here.

23 235. Plaintiffs reserve the right to revise the foregoing class allegations and definitions
 24 based on facts learned and legal developments following additional investigation, discovery, or
 25 otherwise.

COUNTS

COUNT ONE: ~~VIOLATION OF THE FEDERAL WIRETAP ACT, 18 U.S.C. § 2510, ET SEQ.~~ BREACH OF CONTRACT

236. Plaintiffs hereby incorporate Paragraphs 1 through 234235 as if fully stated herein.

237. The Federal Wiretap Act, as amended by Throughout the Electronic Communications Privacy Act of 1986, prohibits the intentional interception of the contents of any wire, oral, or electronic communication through the use of a device. 18 U.S.C. § 2511.

238. ~~The Wiretap Act protects both the sending and receipt of communications.~~

239. ~~18 U.S.C. § 2520(a) provides a private right of action to any person whose wire, oral, or electronic communication is intercepted.~~

240. Class Period, Google's actions in intercepting Privacy Policy and its Android OS settings referred and tracking user app communications while Plaintiffs and Class members turned off "Web & App Activity" were intentional. On information and belief, linked to Google is aware that it is intercepting communications in these circumstances and has taken no remedial action.

1 241-237. Google's interception of communications that Plaintiffs and webpages or
 2 screens wherein the Class Members were sending and receiving while browsing their mobile apps
 3 was done contemporaneously with Plaintiffs' and Class members' sending and receipt of those
 4 communications. In fact, Google received the communications before the communication between
 5 Plaintiffs and Class members and the various apps were completed. could access the Web & App
 6 Activity controls.

7 238. The communications intercepted by Google Throughout the Class Period, Google's
 8 Privacy Policy included "contents" of electronic communications commitments that linked to a
 9 Google webpage with the Web & App Activity controls, such as: "My Activity allows **you to**
 10 **review and control data that's created when you use Google services . . .**" Ex. A at 9 (Privacy
 11 Policy) (emphases added).

12 239. Throughout the Class Period, the Privacy Policy has defined "Google services" to
 13 encompass Google products integrated into third-party apps and sites, such as Firebase SDK
 14 products. Ex. A at 2.

15 240. Throughout the Class Period, the Google webpage containing the Web & App
 16 Activity controls included additional commitments regarding Web & App Activity, such as the
 17 hyperlink with the words "Learn more,"⁶⁹ whereupon Google made the following commitments:

18 **SEE & CONTROL YOUR WEB & APP ACTIVITY**

19

20 You can turn Web & App Activity off or delete past activity at any time...

21 **I. What's saved as Web & App Activity...**

22 Info about your browsing and other activity on sites, apps, and devices that
 23 use Google services

24 When Web & App Activity is on, you can include additional activity like:

25 • Sites and apps that partner with Google to show ads

26

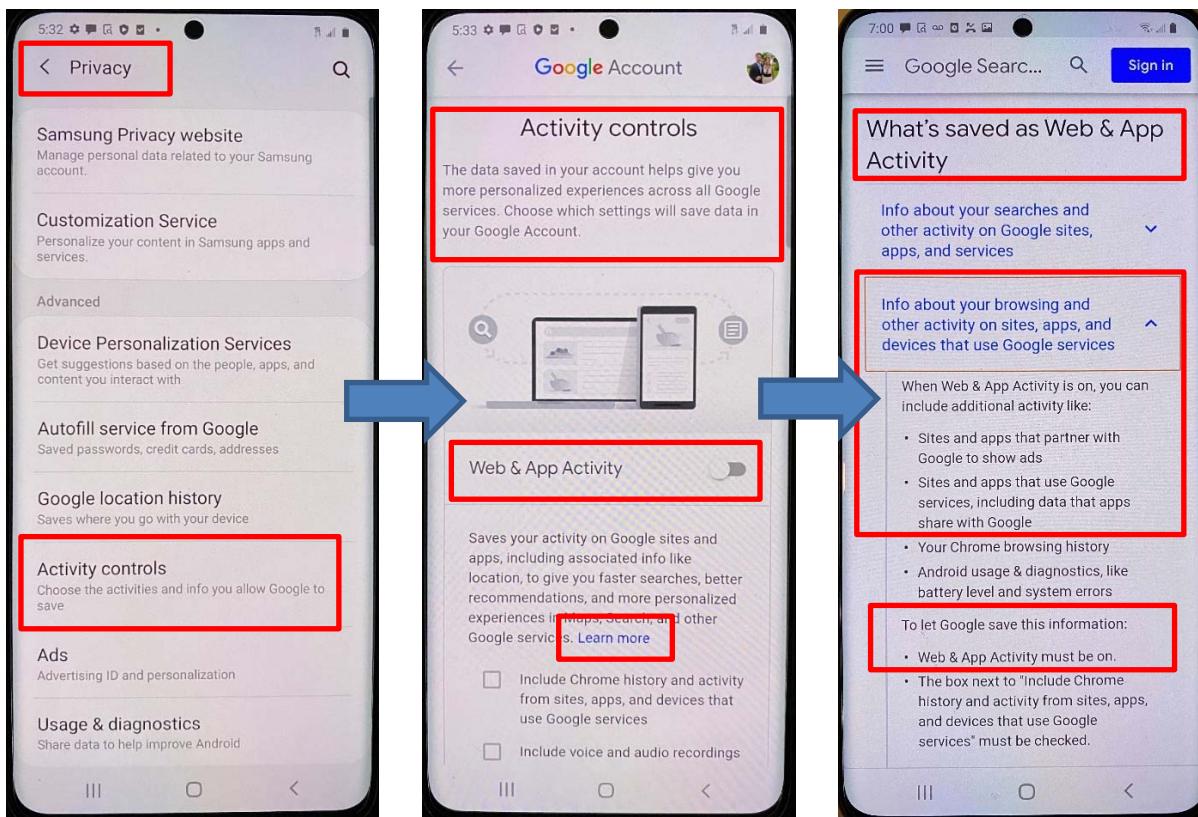

27 ⁶⁹ See & Control Your Web & App Activity, GOOGLE SEARCH HELP, https://support.google.com/
 28 websearch/answer/54068?visit_id=6372555086257257422105376128&hl=en&rd=1 (last visited
Nov. 11, 2020).

- Sites and apps that use Google services, including data that apps share with Google
- Your Chrome browsing history
- Android usage & diagnostics, like battery level and system errors

To let Google save this information:

- Web & App Activity must be on.
- The box next to “Include Chrome history and activity from sites, apps, and devices that use Google services” must be checked.

241. On Android mobile devices, including but not limited to Samsung devices during the Class Period, the same Google commitments were made through Google-presented and required controls for the Android device manufacturers.

SCREEN 1

SCREEN 2

SCREEN 3

242. These commitments, either standing alone or as incorporated into Google’s Terms of Service and/or Privacy Policy, constitute express promises by Google not to intercept or save the identified categories of information, including without limitation information about users’ activity on third-party apps developed with Firebase SDK, when users turned off the Web & App Activity control.

1
2 243. Google's purpose in making these commitments was to induce users, including
3 ~~Plaintiffs and Class members to apps other than Google in the form of detailed URL requests, app~~
4 ~~browsing histories, and search queries which, who did not wish to have such activity intercepted~~
5 ~~or saved, to turn off the Web & App Activity control and continue to use Google services. Such~~
6 ~~continued use benefitted Google not only in its effect of helping to retain such users, but also in~~
7 ~~allowing Google to accrue goodwill by claiming that it was facilitating and respecting users'~~
8 ~~choices about privacy.~~ Plaintiffs and Class members ~~sent to those apps and for which entered into~~
9 ~~express contracts requiring Google not to save their activity data by continuing to use such apps~~
10 ~~and/or other Google services after turning off Web & App Activity.~~

11 242-244. In the alternative, Plaintiffs and Class members received communications
12 ~~in return from those apps~~entered into implied contracts, separate and apart from Google's Terms
13 of Service, requiring Google not to intercept or save such information by continuing to use such
14 apps and/or services after turning off Web & App Activity. Google's communications describing
15 the function of the Web & App Activity setting in conjunction with its conduct in providing a
16 control to change that setting created a reasonable expectation on the part of Plaintiffs and Class
17 members that the control would turn off Google's collection of such activity data, such that
18 Plaintiffs' and Class members' communications with such third-party apps would not be
19 intercepted and recorded by Google. Plaintiffs' and Class members' conduct in turning off Web &
20 App Activity and continuing to use Firebase SDK apps and/or other Google services manifested
21 their acceptance of these commitments and supplied consideration for their enforcement.

22 242. The transmission of data between Plaintiffs and Class members and apps on which
23 ~~Google tracked and intercepted Plaintiffs' and Class members' communications without~~
24 ~~authorization while "Web & App Activity" was turned off were "transfer[s] of signs, signals,~~
25 ~~writing, . . . data, [and] intelligence of [some] nature transmitted in whole or in part by a wire,~~
26 ~~radio, electromagnetic, photoelectronic, or photooptical system that affects interstate~~
27 ~~commerce[,]" and were therefore "electronic communications" within the meaning of 18 U.S.C. §~~
28 2510(12).

1 243. The following constitute “devices” within the meaning of 18 U.S.C. § 2510(5):

- 2 a. The Firebase SDK, computer codes, and programs Google used to
3 intercept and track Plaintiffs’ and Class members’ communications while
4 “Web & App Activity” was turned off;
- 5 b. Plaintiffs’ and Class members’ mobile apps;
- 6 c. Plaintiffs’ and Class members’ mobile devices;
- 7 d. The plan Google carried out to effectuate its tracking and interception of
8 Plaintiffs’ and Class members’ communications while using an app while
9 “Web & App Activity” was turned off.

10 244. Google was not an authorized party to the communications. Plaintiffs and Class
11 members were unaware of Google’s collection of page locations, page referrers, page titles, and user
12 information, did not knowingly send any of the communication to Google, and were browsing apps
13 while “Web & App Activity” was turned off when Google intercepted the communications between
14 Plaintiffs and Class members and apps other than Google. Google could not manufacture its own
15 status as a party to Plaintiffs’ and Class members’ communications with others by surreptitiously
16 redirecting or intercepting those communications.

17 245. As illustrated herein, “the” communications between Plaintiffs and Class members
18 and apps were simultaneous to, but *separate* from, the channel through which Google illegally
19 acquired the contents of those communications.

20 246. Google never had any authorization or consent for its continued interception of the
21 user’s communications after users turned off “Web & App Activity.” Google represented to
22 Plaintiffs, Class members, and the public that consumers could “control . . . what information
23 [they] share with Google” including with “[p]roducts that are integrated into third party apps and
24 sites by turning off “Web & App Activity.” Moreover, the communications intercepted by Google
25 were plainly confidential, which is evidenced by the fact that Plaintiffs and Class members turned
26 off “Web & App Activity” in a manner consistent with Google’s own recommendations to prevent
27 sharing of information with Google prior to accessing or communicating with apps.

28 247. Google never had any authorization or consent for its continued gathering of the

1 user's communications after users turned off "Web & App Activity." Google represented to
 2 Plaintiffs, Class members, and the public at large that users could "control . . . what information
 3 [they] share with Google" and stop Google's data collection by turning off Web & App Activity.
 4 Moreover, the communications intercepted by Google were plainly confidential, which is
 5 evidenced by the fact that Plaintiffs and Class members turned off Web & App Activity in a
 6 manner consistent with Google's own recommendations to prevent sharing of information with
 7 Google.

8 248. After intercepting the communications, Google then used the contents of the
 9 communications knowing or having reason to know that such information was obtained through
 10 the interception of electronic communications in violation of 18 U.S.C. § 2511(1)(a).

11 243. Plaintiffs and Class members suffered damages as a result of Google's conduct in
 12 an amount to be proved at trial. Plaintiffs and Class members have suffered loss by reason of these
 13 violations, including, but not limited to, violation of their rights to privacy and loss of value in
 14 their personally identifiable information.

15 245. Google has been unjustly enriched In either event, Google breached its promises by
 16 continuing to intercept those communications to collect and use such activity data while Plaintiffs
 17 and Class members had Web & App Activity turned off, including without limitation by way of
 18 Firebase SDK products such as Google Analytics for Firebase, [REDACTED]
 19 [REDACTED], and also using the GMS background process on Android devices.

20 246. Plaintiffs and Class members fulfilled their obligations under the relevant contracts
 21 and are not in breach of any.

22 247. As a result of Google's breaches, Google was able to obtain the personal
 23 information and personal property of Plaintiffs and Class members in the form of data, unjustly
 24 enriching Google and allowing Google to earn unjust profits.

25 248. Plaintiffs and Class Members also did not receive the benefit of the bargain for
 26 which they contracted and for which they paid valuable consideration in the form of personal
 27 information they did agree to share, which has ascertainable value to be proven at trial.

28 244. Plaintiffs, on behalf of themselves and Class members, seek compensatory

1 damages, consequential damages, and/or non-restitutionary disgorgement in an amount to
 2 be proven at trial.

3 245-249. As a result of the above actions and pursuant to 18 U.S.C. § 2520, the Court
 4 should assess actual and statutory damages to Plaintiffs and the Class members; and declarative,
 5 injunctive and declaratory, or other equitable relief; punitive damages in an amount to be
 6 determined by a jury, but sufficient to prevent the same or similar conduct by Google in the future,
 7 and a reasonable attorneys' fee and other litigation costs reasonably incurred.

8 **COUNT TWO: VIOLATION OF THE CALIFORNIA INVASION OF PRIVACY ACT**
 9 **(“CIPA”), CALIFORNIA PENAL CODE §§ 631 AND 632**

10 246-250. Plaintiffs hereby incorporate paragraphs 1 to 234235 as if fully stated
 herein.

11 247-251. The California Invasion of Privacy Act is codified at Cal. Penal Code §§
 12 630 to 638. The Act begins with its statement of purpose:

13 The Legislature hereby declares that advances in science and
 14 technology have led to the development of new devices and
 15 techniques for the purpose of eavesdropping upon private
 16 communications and that the invasion of privacy resulting from the
 17 continual and increasing use of such devices and techniques has
 18 created a serious threat to the free exercise of personal liberties and
 19 cannot be tolerated in a free and civilized society.

20 Cal. Penal Code § 630.

21 248-252. Cal. Penal Code § 631(a) provides, in pertinent part:

22 Any person who, by means of any machine, instrument, or
 23 contrivance, or in any other manner . . . willfully and without the
 24 consent of all parties to the communication, or in any unauthorized
 25 manner, reads, or attempts to read, or to learn the contents or meaning
 26 of any message, report, or communication while the same is in transit
 27 or passing over any wire, line, or cable, or is being sent from, or
 28 received at any place within this state; or who uses, or attempts to
 29 use, in any manner, or for any purpose, or to communicate in any
 30 way, any information so obtained, or who aids, agrees with, employs,
 31 or conspires with any person or persons to lawfully do, or permit, or
 32 cause to be done any of the acts or things mentioned above in this
 33 section, is punishable by a fine not exceeding two thousand five
 34 hundred dollars

35 249. Cal. Penal Code § 632(a) provides, in pertinent part:

1 A person who, intentionally and without the consent of all parties to a
 2 confidential communication, uses an electronic amplifying or
 3 recording device to eavesdrop upon or record the confidential
 4 communication, whether the communication is carried on among the
 parties in the presence of one another or by means of a telegraph,
 telephone, or other device, except a radio, shall be punished by a fine
 not exceeding two thousand five hundred dollars.....

5 250.253. Under either section of the CIPA§ 631, a defendant must show it had the
 6 consent of all parties to a communication.

7 251.254. Google has its principal place of business in California; designed, contrived
 8 and effectuated its scheme to track and intercept consumer communications while they were
 9 browsing apps from their device while “Web & App Activity” was turned off; and has adopted
 10 California substantive law to govern its relationship with its users.

11 252.255. At all relevant times, Google’s tracking and interceptions of Plaintiffs’ and
 12 Class members’ communications while using an app with “Web & App Activity” turned off was
 13 without authorization and consent.

14 253.256. Google’s non-consensual tracking of Plaintiffs’ and Class members’
 15 communications while using an app with “Web & App Activity” turned off was designed to
 16 attempt to learn at least some meaning of the content in the mobile app pages.

17 254.257. The following items constitute “machine[s], instrument[s], or
 18 contrivance[s]” under the CIPA, and even if they do not, Google’s deliberate and admittedly
 19 purposeful scheme that facilitated its interceptions falls under the broad statutory catch-all
 20 category of “any other manner”:

- 21 a. The Firebase SDK, computer codes, and programs Google used to
 22 intercept and track Plaintiffs’ and Class members’ communications while
 23 “Web & App Activity” was turned off;
- 24 b. Plaintiffs’ and Class members’ mobile apps;
- 25 c. Plaintiffs’ and Class members’ mobile devices;
- 26 d. The plan Google carried out to effectuate its tracking and interception of
 27 Plaintiffs’ and Class members’ communications while using an app while

1 “Web & App Activity” was turned off.

2 255-258. Plaintiffs and Class members suffered damages as a result of Google’s
 3 conduct in an amount to be proved at trial. Plaintiffs and Class members suffered loss by reason
 4 of these violations, including, but not limited to, violation of their rights to privacy and loss of
 5 value in their personally identifiable information.

6 256-259. Google has been unjustly enriched in an amount to be proven at trial.

7 257-260. Pursuant to California Penal Code § 637.2, Plaintiffs and Class members
 8 have been injured by the violations of California Penal Code §§ 631-and 632, and each seek
 9 damages for the greater of \$5,000 or three times the amount of actual damages, as well as
 10 injunctive relief.

11 **COUNT THREE: VIOLATIONS OF THE COMPREHENSIVE COMPUTER DATA
 ACCESS AND FRAUD ACT (“CDAFA”), CAL. PENAL CODE § 502 ET SEQ.**

12 258-261. Plaintiffs hereby incorporate Paragraphs 1 through 234235 as if fully stated
 13 herein.

14 259-262. Cal. Penal Code § 502 provides: “For purposes of bringing a civil or a
 15 criminal action under this section, a person who causes, by any means, the access of a computer,
 16 computer system, or computer network in one jurisdiction from another jurisdiction is deemed to
 17 have personally accessed the computer, computer system, or computer network in each
 18 jurisdiction.” Smart phone devices with the capability of using mobile apps are “computers” within
 19 the meaning of the statute.

20 263. Google violated Cal. Penal Code § 502(c)(2) by knowingly accessing and without
 21 permission taking, copying, analyzing, and using Plaintiffs’ and Class members’ data.

22 264. Despite Google’s false representations to the contrary, Google effectively charged
 23 Plaintiffs, Class members, and other consumers and Google was unjustly enriched, by acquiring
 24 their sensitive and valuable personal information without permission and using it for Google’s own
 25 financial benefit, including to advance its advertising business. Plaintiffs and Class members
 26 retain a stake in the profits Google earned from their personal browsing histories and other data
 27 because, under the circumstances, it is unjust for Google to retain those profits

265. Google accessed, copied, took, analyzed, and used data from Plaintiffs' and Class members' computers in and from the State of California, where Google: (1) has its principal place of business; and (2) used servers that provided communication links between Plaintiffs' and Class members' computers and Google, which allowed Google to access and obtain Plaintiffs' and Class members' data. Accordingly, Google caused the access of Plaintiffs' and Class members' computers from California and is therefore deemed to have accessed Plaintiffs' and Class members' computers in California.

266. As a direct and proximate result of Google's unlawful conduct within the meaning of Cal. Penal Code § 502, Google has caused loss to Plaintiffs and Class members in an amount to be proven at trial.

267. Google has been unjustly enriched in an amount to be proven at trial.

268. Plaintiffs, on behalf of themselves and Class members, seek compensatory damages and/or disgorgement in an amount to be proven at trial, and declarative, injunctive, or other equitable relief.

269. Plaintiffs and Class members are entitled to punitive or exemplary damages pursuant to Cal. Penal Code § 502(e)(4) because Google's violations were willful and, upon information and belief, Google is guilty of oppression, fraud, or malice as defined in Cal. Civil Code § 3294.

270. Plaintiffs and the Class members are also entitled to recover their reasonable attorneys' fees pursuant to Cal. Penal Code § 502(e).

COUNT FOUR: INVASION OF PRIVACY

271. Plaintiffs hereby incorporate Paragraphs 1 through 234235 as if fully stated herein.

272. The right to privacy in California's Constitution creates a right of action against private entities such as Google.

273. Plaintiffs' and Class members' expectation of privacy is deeply enshrined in California's Constitution. Article I, section 1 of the California Constitution provides: "All people are by nature free and independent and have inalienable rights. Among these are enjoying and defending life and liberty, acquiring, possessing, and protecting property and pursuing and

1 obtaining safety, happiness, *and privacy*.” The phrase “*and privacy*” was added by the “Privacy
 2 Initiative” adopted by California voters in 1972.

3 274. The phrase “*and privacy*” was added in 1972 after voters approved a proposed
 4 legislative constitutional amendment designated as Proposition 11. Critically, the argument in
 5 favor of Proposition 11 reveals that the legislative intent was to curb businesses’ control over the
 6 unauthorized collection and use of consumers’ personal information, stating:

7 The right of privacy is the right to be left alone...It prevents
 8 government and business interests from collecting and stockpiling
 9 unnecessary information about us and from misusing information
 10 gathered for one purpose in order to serve other purposes or to
 11 embarrass us. Fundamental to our privacy is the ability to control
 12 circulation of personal information. This is essential to social
 13 relationships and personal freedom.⁷⁰

14 275. The principal purpose of this constitutional right was to protect against unnecessary
 15 information gathering, use, and dissemination by public and private entities, including Google.

16 276. To plead a California constitutional privacy claim, a plaintiff must show an invasion
 17 of (1) a legally protected privacy interest; (2) where the plaintiff had a reasonable expectation of
 18 privacy in the circumstances; and (3) conduct by the defendant constituting a serious invasion of
 19 privacy.

20 277. As described herein, Google has intruded upon the following legally protected
 21 privacy interests:

22 a. The Federal Wiretap Act as alleged herein;

23 b.a. The California Invasion of Privacy Act as alleged herein;

24 e.b. A Fourth Amendment right to privacy contained on personal computing
 25 devices, including app-browsing history, as explained by the United States
 26 Supreme Court in the unanimous decision of *Riley v. California*;

27 d.c. The California Constitution, which guarantees Californians the right to

28 ⁷⁰ BALLOT PAMP., PROPOSED STATS. & AMENDS. TO CAL. CONST. WITH ARGUMENTS TO VOTERS,
 GEN. ELECTION *26 (Nov. 7, 1972).

privacy; and

e.d. Google’s Privacy Policy and policies referenced therein and other public promises it made not to track or intercept the Plaintiffs’ and Class members’ communications or access their computing devices while “Web & App Activity” were turned off.

278. Plaintiffs and Class members had a reasonable expectation of privacy under the circumstances in that Plaintiffs and Class members could not reasonably expect Google would commit acts in violation of federal and state civil and criminal laws; and Google affirmatively promised users (including Plaintiffs and Class members) it would not track their communications or access their computing devices and mobile apps while they turned off “Web & App Activity.”

279. Google's actions constituted a serious invasion of privacy in that it:

- a. Invaded a zone of privacy protected by the Fourth Amendment, namely the right to privacy in data contained on personal computing devices, including search and browsing histories;
- b. Violated several federal criminal laws, including the Wiretap Act;
- c. Violated dozens of state criminal laws on wiretapping and invasion of privacy, including the California Invasion of Privacy Act;
- d. Invaded the privacy rights of millions of Americans (including Plaintiffs and class members) without their consent;
- e. Constituted the unauthorized taking of valuable information from millions of Americans through deceit; and
- f. Further violated Plaintiffs' and Class members' reasonable expectation of privacy via Google's review, analysis, and subsequent uses of Plaintiffs' and Class members' private and other browsing activity that Plaintiffs and Class members considered sensitive and confidential.

280. Committing criminal acts against millions of Americans constitutes an egregious breach of social norms that is highly offensive.

281. The surreptitious and unauthorized tracking of the internet communications of

1 millions of Americans, particularly where, as here, they have taken active (and recommended)
 2 measures to ensure their privacy, constitutes an egregious breach of social norms that is highly
 3 offensive.

4 282. Google's intentional intrusion into Plaintiffs' and Class members' internet
 5 communications and their computing devices and mobile apps was highly offensive to a reasonable
 6 person in that Google violated federal and state criminal and civil laws designed to protect
 7 individual privacy and against theft.

8 283. The taking of personally-identifiable information from millions of Americans
 9 through deceit is highly offensive behavior.

10 284. Secret monitoring of mobile apps is highly offensive behavior.

11 285. Following Google's unauthorized interception of the sensitive and valuable
 12 personal information, the subsequent analysis and use of that private app activity to develop and
 13 refine profiles on Plaintiffs, Class members, and consumers violated their reasonable expectations
 14 of privacy.

15 286. Wiretapping and surreptitious recording of communications is highly offensive
 16 behavior.

17 287. Google lacked a legitimate business interest in tracking users on their mobile apps
 18 without their consent.

19 288. Plaintiffs and Class members have been damaged by Google's invasion of
 20 their privacy and are entitled to just compensation and injunctive relief.

21 289. Google has been unjustly enriched in an amount to be proved at trial.

22 **COUNT FIVE: INTRUSION UPON SECLUSION**

23 290. Plaintiffs hereby incorporate Paragraphs 1 through 234235 as if fully stated
 24 herein.

25 291. Plaintiffs asserting claims for intrusion upon seclusion must plead (1) intrusion into
 26 a private place, conversation, or matter; (2) in a manner highly offensive to a reasonable person.

27 292. In carrying out its scheme to track and intercept Plaintiffs' and Class members'
 28 communications while they were using mobile apps with "Web & App Activity" turned off, in

1 violation of its own privacy promises, Google intentionally intruded upon the Plaintiffs' and Class
 2 members' solitude or seclusion in that it effectively placed itself in the middle of conversations to
 3 which it was not an authorized party.

4 293. Google's tracking and interception were not authorized by Plaintiffs and Class
 5 members, the mobile app servers with which they were communicating, or even Plaintiffs' and
 6 Class members' mobile apps.

7 294. Google's intentional intrusion into Plaintiffs' and Class members' internet
 8 communications and their computing devices and mobile apps was highly offensive to a reasonable
 9 person in that they violated federal and state criminal and civil laws designed to protect individual
 10 privacy and against theft.

11 295. The taking of personally-identifiable information from millions of Americans
 12 through deceit is highly offensive behavior, particularly where, as here, Plaintiffs and Class
 13 members took active (and recommended) measures to ensure their privacy.

14 296. Secret monitoring of mobile apps is highly offensive behavior.

15 297. Wiretapping and surreptitious recording of communications is highly offensive
 16 behavior.

17 298. Public polling on internet tracking has consistently revealed that the overwhelming
 18 majority of Americans believe it is important or very important to be "in control of who can get
 19 information" about them; to not be tracked without their consent; and to be in "control[] of what
 20 information is collected about [them]." The desire to control one's information is only heightened
 21 while a person has their "Web & App Activity" setting turned off.

22 299. Plaintiffs and the Class members have been damaged by Google's invasion of
 23 their privacy and are entitled to reasonable compensation including but not limited to disgorgement
 24 of profits related to the unlawful internet tracking.

25 300. Google has been unjustly enriched in an amount to be proved at trial.

26 **COUNT SIX: VIOLATION OF THE UNFAIR COMPETITION LAW ("UCL"), CAL.
 27 BUS. & PROF. CODE § 17200, ET SEQ.**

28 304. Plaintiffs hereby incorporate Paragraphs 1 through 234 as if fully stated herein.

1 305. Google engaged in unlawful and unfair business practices within the meaning of
 2 the UCL.

3 306. Google's conduct and decisions giving rise to the conduct in substantial part took
 4 place in California.

5 307. Google violated the UCL's unlawful prong by engaging in the alleged practices
 6 in violation of, inter alia, the Federal Wiretap Act (18 U.S.C. § 2510 *et seq.*), the California
 7 Invasion of Privacy Act, (Cal. Penal Code §§ 631 & 632), the California Comprehensive
 8 Computer Data Access and Fraud Act (Cal. Penal Code § 502 *et seq.*), the California
 9 Constitution, Article I, Section 1, Plaintiffs' and Class members' rights of privacy and seclusion,
 10 the FTC Act (including in violation of the FTC consent decrees, which were designed with the
 11 purpose of protecting consumers, including Plaintiffs and Class members), and California
 12 Business & Professions Code § 22576, as further confirmed by the CCPA.

13 308. Google violated the UCL's unfairness prong by, as alleged above, without consent
 14 intercepting and collecting data regarding users' interaction with apps while those users had
 15 turned off the Web & App Activity feature, and then using that data without consent for Google's
 16 financial benefit.

17 309. Google's conduct was immoral, unethical, oppressive, unscrupulous, and
 18 substantially injurious to Plaintiffs and Class members, and the injury to Plaintiffs and Class
 19 members outweighs the utility of that conduct.

20 310. Google's conduct also resulted in substantial consumer injury, including to
 21 Plaintiffs and Class members, not outweighed by any countervailing benefits to consumers or
 22 competition, and is an injury the consumers could not reasonably have avoided.

23 311. Google's conduct, as described above, also offends public policy tethered to the
 24 federal and state laws identified in paragraph 307 and also with respect to the rights of Plaintiffs
 25 and Class members under the California Constitution, and confirmed by the CCPA.

26 312. The data taken by Google without consent had economic value, as alleged above,
 27 and Google earned money and was unjustly enriched by its collection and use of that data.

28 313. As a result of Google's violation of the UCL's unlawful and unfairness prongs,

1 ~~Plaintiffs and Class members suffered injury in fact and lost money or property. Plaintiffs and~~
 2 ~~Class members: (a) provided consideration and fulfilled their obligations with respect to~~
 3 ~~Google's Privacy Policy and other disclosures described herein, but Google failed to fulfill its~~
 4 ~~obligations, whereby Plaintiffs and Class members lost the benefit of the bargain with Google~~
 5 ~~and surrendered more than they otherwise would have; (b) had property interests in their data,~~
 6 ~~which Google took without consent and without any payment to Plaintiffs or Class members for~~
 7 ~~that property, thereby depriving them of their property and also diminishing the value of that~~
 8 ~~property; and (c) paid for certain apps whereby Google received money from Plaintiffs and Class~~
 9 ~~members but without their consent to Google's interception, collection, and use of data relating~~
 10 ~~to those apps, while Web & App Activity was turned off.~~

11 ~~314. As a result of Google's violations of the UCL, Plaintiffs and Class members are~~
 12 ~~entitled to restitution, injunctive relief, and all other applicable relief available under § 17200 et~~
 13 ~~seq.~~

14 PRAYER FOR RELIEF

15 WHEREFORE, Plaintiffs respectfully request that this Court:

16 A. Certify this action is a class action pursuant to Rule 23 of the Federal Rules of Civil
 17 Procedure;

18 B. Appoint Plaintiffs to represent the Classes;

19 C. Appoint undersigned counsel to represent the Classes;

20 D. Award compensatory damages, including statutory damages where available, to
 21 Plaintiffs and the Class members against Defendant for all damages sustained as a result of
 22 Defendant's wrongdoing, in an amount to be proven at trial, including interest thereon;

23 E. Award nominal damages to Plaintiffs and the Class members against Defendant;

24 F. Award punitive damages to Plaintiffs and the Class members against Defendant;

25 G. Non-restitutionary disgorgement of all of Defendant's profits that were derived, in
 26 whole or in part, from Google's interception and subsequent use of Plaintiffs' communications;

27 G.H. Order Defendant to disgorge revenues and profits wrongfully obtained;

28 H.I. Permanently restrain Defendant, and its officers, agents, servants, employees and

1 attorneys, from intercepting, tracking, or collecting communications after Class members turned
 2 off “Web & App Activity,” or otherwise violating its policies with users;

3 L.J. Award Plaintiffs and the Class members their reasonable costs and expenses
 4 incurred in this action, including attorneys’ fees and expert fees; and

5 J.K. Grant Plaintiffs and the Class members such further relief as the Court deems
 6 appropriate.

7 **JURY TRIAL DEMAND**

8 Plaintiffs demand a trial by jury of all issues so triable.
